

Seaber for shipowners

Cloud-based real-time planning, optimization and communication solution for bulk cargo & vessels

With Seaber's schedule planning solution, shipowners & operators in the liquid, dry and break bulk industry can optimize operational efficiency. We take into account multi-port and multi-parcel voyages, costs and durations, vessels capacity and availability, resulting in optimised, yet realistic schedules for cargo deliveries and vessel utilisation. In addition Seaber automates direct communication between internal & external stakeholders.

System overview

Main features

- AI-assisted planning of fleet schedule
- Accurate time and cost estimates for schedule optimisation
- Real-time cooperation between chartering, planning and operations
- Seamless data sharing between all stakeholders
- Reporting and analysis

Benefits of use

- Maximising asset utilisation, reducing ballast voyages and increasing profits
- Proven leading-edge technology that helps save the environment and unlocks the full potential of your team
- Streamlined stakeholder & internal communication
- Independent & secure software with single input & API integration and Intuitive user experience
