

Business Problem:

Currently, there are disparate and inconsistent integration paths to a **Digital Telecomm Marketing Company (Company A)** systems as well as intensive development efforts to integrate with new partners and expose new APIs. **Company A** does not have a standard way to manage 3rd Party ecosystems and faces challenges while exposing new APIs or integrating with new 3rd party partners. APIs provide the drive for digital innovation and enable the delivery of **Company A's** services to 3rd parties and other internal stakeholders.

Description of solution:

A portal was developed that can be utilized by **Company A** to expose APIs to 3rd parties and partners and for partners/ 3rd parties to publish, maintain, monitor and secure APIs at any scale. In other words, have a self-service API development portal with an easy-to-use graphical interface for 3rd parties.

Period of Engagement:

18 July 2019 – 31 May 2020

Tech Stack Used:

- HTML(Front End)
- CSS(Front End)
- JavaScript/jQuery(Front End)
- PHP(Back End)
- PostgreSQL(Database)
- PHP(Server)
- Drupal 7(CMS)
- Apigee(API)
