

Business Problem:

Small Food Produce is often difficult to market and connecting the producers to effective delivery companies is an arduous journey. The business relied on using Social Media to make sales and that did not have the payment portal integration required.

A responsive website that connects the suppliers to the delivery company and then to the buyers needed to be developed

Description of solution:

The responsive website allowed, as most ecommerce websites to select products, pay and then get it delivered at a suitable time for both parties. It sent the invoice and requisition to the relevant parties and then offered the admin portal to track sales per product and client.

Period of Engagement:

June 2020 – present

Tech Stack Used:

- Shopify(Front End)
- PayFast(Payment Portal)
- GraphQL(API)
- MongoDB(Database)
- Heroku(Cloud)
