

## Full-Time Cloud Software Developer/Team Leader

Seeking a mid-level cloud software developer with experience designing, building, and deploying cloud-based enterprise applications. The role requires proficiency in maintenance of existing and development of new microservices. Role has the opportunity to grow the department as the company scales.

### Responsibilities

- Monitor and maintain existing cloud services
- Own cloud architecture, security, and connectivity
- Design and develop new services and APIs
- Work with mobile, IoT, and other cloud engineering resources to deliver solutions.

### Skills / Experience

- 5-10 years of relevant experience developing microservices for enterprise cloud applications. Preferably big data applications.
- Experience running projects, leading technical teams, and working with leadership in a fast-growing environment
- Expert in AWS, Java, Spring, RESTful services
- Microservices deployment using Docker, Service Mesh, and K8 or Fargate
- Monitoring and maintenance of production systems
- Data architecture - SQL, NoSQL, Data Lakes, and Warehouse
- API design and documentation
- Writing and automating system, integration, and unit tests

### As a plus:

- New Relic expert
- Front end web development (react or vue)
- CI/CD pipeline creation
- Security for PII and/or PCI data
- Analytics for big data (IoT, PII, MGD, etc.)
- Data engineering for DS/AI/ML (EMR, SageMaker, etc.)
- Worked with mobile and/or IoT engineering teams
