MONTEREAU®

February 1, 2021

Dear Residents, Staff, Families;

COVID-19 Vaccine Update

Thank you to everyone who attended our second vaccination clinic this weekend! It went very well. Many residents and employees expressed positive comments and gratitude that they were able to receive the vaccine at Montereau. Thus far, reporting of second dose side effects has been minimal.

Our last clinic is tentatively scheduled for February 20th and 21st, however there is a high probability that it may be just one day as it is only for residents and staff to receive their second vaccine. We will provide additional updates and forms the week prior to the third clinic.

The total number of employees receiving both vaccine doses is 185 with an additional 58 receiving their first dose this weekend. This equates to approximately 54% of the staff who have received the vaccine. The total number of residents who received both vaccine doses is 451 (326 Towers/Garden Home residents and 125 Health Center residents) with an additional 42 receiving their first dose this weekend (32 Towers/Garden Home residents and 10 Health Center residents). Approximately 99% of our Towers/Garden Home residents were vaccinated here at Montereau. A few residents have notified us that they received their vaccinations off campus.

Positive Resident - Towers

A Towers resident tested positive on January 27th. The resident will remain in their apartment until the end of their quarantine.

Thank you,

Angela Cozort, President and CEO
