

2021

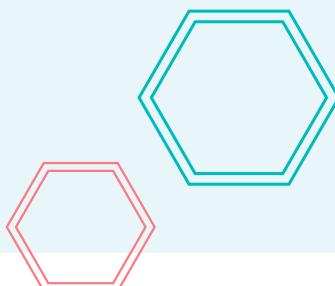

INTERIM REPORT 1 January–30 June 2021

elicera
THERAPEUTICS

Corp. Reg. No. 556966-4955

Elicera Therapeutics AB (publ) Interim Report

1 January–30 June 2021

Second quarter (April–June 2021)

- Operating loss totaled SEK -1,818,751 (-10,570)
- Loss for the period totaled SEK -1,818,888 (-10,570)
- Cash flow from operating activities totaled SEK 3,486,666 (-12,238)
- Earnings per share totaled SEK -0.15 (-0.00)

Period (January–June 2021)

- Operating loss totaled SEK -4,223,302 (-15,470)
- Loss for the period totaled SEK -4,224,377 (-15,470)
- Cash flow from operating activities totaled SEK 5,631 (-18,038)
- Earnings per share totaled SEK -0.35 (-0.00)

Key events during the second quarter:

- Elicera conducted a new share issue that attracted a great deal of interest and generated proceeds of SEK 55.3 million net after costs.

- Elicera was listed on Nasdaq First North Growth Market on 11 June.
- G&W appointed Corporate Advisor
- Elicera Therapeutics submitted a patent application for development of the next generation of oncolytic viruses
- Elicera Therapeutics received ATMP classification of EMA for oncolytic virus

Significant events during the period

- The Board of Directors was expanded with the addition of cell therapy specialist Karin Hoogendorp.

Key events after the end of the period:

- No other key events that impact earnings or the financial position occurred after the end of the period.
- The Board of Directors and executive management of Elicera Therapeutics increased their holdings and purchased shares.

Contents

Definitions of key performance indicators

Working capital

Sum total of current assets (including cash in hand) minus current liabilities.

Quick asset ratio

Sum total of current assets (including cash in hand) as a percentage of current liabilities.

Equity/asset ratio

Equity in relation to the balance sheet total.

Earnings per share before dilution

Earnings after tax divided by the average number of shares.

Average number of shares

The number of shares, on average, counted from the registration date of the issuance. The new share issue in June 2021 was registered in July. Adjustments made for two splits.

CEO Comments

Elicera's area of focus is known as immuno-oncology, meaning cancer therapy based on using the patient's immune system against tumors. This is a field with the potential to revolutionize the treatment of cancer.

It is a rapidly growing market whose estimated total value will be USD 150 billion by 2025. We see an opportunity here to position the company as a significant player with effective immunotherapies that could also be combined with products from other pharma companies.

Elicera's drug candidates are based on years of research conducted by Professor Magnus Essand's research group at Uppsala University – crucial work that has generated interest both from the media and the general public and above all has won us several awards and research grants. This has provided the team with the opportunity to develop the company's current drug candidates, as well as to begin clinical trials using research funds. We are incredibly grateful for the significant support that has made it possible for us to raise our sights and our projects out of the academic environment and move towards commercial development.

I became acquainted with Professor Essand and his colleague Di Yu back in 2014, when I was the CEO of the immuno-oncology company Immunicum, and since then have followed the positive developments in their team's unique research with considerable interest. I am therefore grateful and pleased that we now have the opportunity to work together at Elicera to produce new and exciting immuno-oncology treatments.

"Elicera's drug candidates are based on years of research that has generated interest both from the media and the general public and above all has won us several awards and research grants."

CEO and co-founder
Jamal El-Mosleh

Our most advanced drug candidate, ELC-100/AdVince, is based on an oncolytic virus, which reproduces in and breaks up only cancer cells, not healthy cells. The project is currently in a clinical phase I/II trial for the treatment of neuroendocrine tumors, or NETs, with seven out of a total of twelve planned patients treated to date. The study is being carried out in partnership with Uppsala University, which is sponsoring the study through financing from the VictoryNET Foundation. The foundation was set up by the late financier Vince Hamilton, himself a sufferer of NETs, and our drug candidate has therefore been named after him. The study, known as a dose-escalation study, is one in which we are investigating primarily the safety of the drug candidate. In late June, we announced that Elicera had received Advanced Therapy Medicinal Product (ATMP) classification for ELC-100 from the European Medicines Agency (EMA). The ATMP classification is important, and gives us a clear regulatory path to the market.

In addition to ELC-100, we are developing the next generation of oncolytic viruses, ELC-201, which has been genetically modified to achieve a total of three crucial mechanisms of action with a parallel attack on cancer cells via the immune system. Moreover, this product is applicable to most forms of cancer. A patent application was submitted in April this year to protect our drug candidate.

Furthermore, Elicera is one of the few companies in Europe that is developing CAR T-cells against leukemia and lymphoma as well as solid tumors. Treatment with CAR T-cells involves a new method of immuno-oncology to attack cancer using the patient's own modified T-cells. The method has proven generally successful in treating patients with different types of blood cancers, without other treatment alternatives, many of whom have become completely free of tumors. ASCO, one of the world's largest cancer organizations, named CAR T-cells the "Advance of the Year" for 2018. We intend to contribute our own specially modified CAR T-cells to the field, which have the ability to further strengthen the capacity of the immune system to fight cancer cells, and we thereby intend to treat patients with blood cancers who have relapsed or are resistant to conventional CAR T-cell treatment. We are also developing immunity-boosting CAR T-cells for treating solid tumors, a field still in its infancy where CAR T-cells have so far not been particularly successful as with leukemia and lymphoma. Last but not least, I would like to emphasize that our CAR T-cells are strengthened using our own in-house technological platform, which we call iTANK (ImmunoTherapies Activated with NAP for Efficient Killing), which is intended to activate the patient's innate immune system for a parallel attack on cancer via CD8+ T cells. We see great potential in this platform, which can be used to strengthen not only our own CAR T-cells but also other companies' CAR T-cells under development.

"Elicera consists of a team with solid experience from both research and immuno-oncology drug development, including clinical trials with both CAR T-cells and oncolytic viruses."

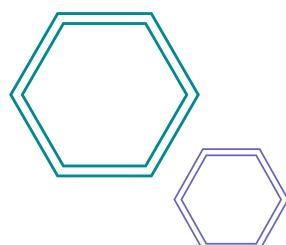

In June, Elicera was listed on the Nasdaq First North Growth Market, and in conjunction with this we hedged SEK 62 million before issue costs, which is sufficient to finance operations through at least mid-2023. We are thus well equipped to take Elicera a step further, starting more clinical trials with our immunotherapies. Focus for 2021:

- Stronger organization.
- Continue ongoing GMP production of virus vectors in order to create our CAR T-cells for ELC-301 ahead of the Phase I/II study planned to commence next year.
- Continue the ongoing Phase I/II study with ELC-100 vars syfte är att fastställa max tolererbar dos att sedan testas i steg två i ytterligare 12 patienter.
- Conclude crucial preclinical studies for new clinical trials planned over the coming years.
- (Initiate contact with potential stakeholders for the iTANK platform.) Partneraktiviteter initieras och underhålls löpande.

We have come far, and we now see exciting clinical programs ahead of us with our promising drug candidates and several ongoing patient studies in 2023 and onward.

I would like to thank all our shareholders for their confidence and support to date!

Jamal El-Mosleh
CEO and co-founder

Introduction to Elicera Therapeutics

Elicera Therapeutics AB is a clinical stage immuno-oncology company developing cell and gene therapies that use the patient's own immune system to fight cancer.

The attempt to fight cancer using the patient's own immune system has been ongoing for decades, but it is only within the last ten years that cancer immunotherapy (immuno-oncology) has been successfully used. In only a few years, immuno-oncology has revolutionized how we treat cancer. In contrast to traditional cancer therapies such as radiation, surgery and chemotherapy, immuno-oncology deals with training the body's own immune system to fight cancer. This occurs in mainly two ways: by triggering the immune system against cancer, primarily by activating tumor-killing T cells (Elicera's focus), and by removing the tumor's suppressive activity on the immune system.

The company's product portfolio consists of four drug candidates, of which two are in the field of oncolytic viruses (ELC-100 and ELC-201) and two are in the field of CAR T-cell treatments (ELC-301 and ELC-401). Additionally, Elicera has developed a platform technology called iTANK (Immunotherapies Activated with NAP for Efficient Killing) that could be used for further boosting the immunity of all CAR T-cell treatments under development.

The ELC-100 and ELC-301 projects have come farthest in their development towards becoming drugs:

1. ELC-100 is an oncolytic virus that has the capacity to selectively kill cancer cells but leave healthy cells alone. It is

now being used in a patient study (clinical Phase I/II testing) for treatment of neuroendocrine tumors, meaning tumors that originate in the neuroendocrine system.

2. ELC-301 is a CAR T-cell therapy based on genetically modifying the patient's T cells so that they recognize targets on the tumor cells in order to attack and kill them. ELC-301 was developed for treating B-cell lymphoma, a cancer that originates in the lymphatic system.

Elicera's strengths and competitive advantages

Elicera's operation is founded on years of research conducted by Professor Magnus Essand, who has a sterling reputation in the field, and his research group at Uppsala University. Elicera's strengths are based on a profound understanding of how cells and viruses can be genetically modified to trigger a robust immune response to cancer. Building on this competence, the company has developed a technology platform called iTANK (Immunotherapies Activated with NAP for Efficient Killing) that enables the development of various types of immunoactivated treatments, each of which gives rise to a multifaceted attack on the tumors. Elicera believes it has a unique position with its iTANK platform, which the company also believes could be used to optimize all CAR T-cells under development by other companies as well (see Table 1 below).

	WHAT?	WHY?	PROBLEM?	ELICERA'S SOLUTION
Immuno-oncology	Treating cancer via the immune system	Curative potential	Individual therapies insufficient, combination treatments required	Development of CAR T-cells and OVs that can be combined with other immunotherapies
CAR T-cells	Train T cells via genetic modification to recognize targets on the tumor cell	Demonstrated curative potential in blood cancer	Challenges in solid tumors: 1. Hostile micro-environment 2. Shortage of relevant targets	iTANK platform answers challenges 1) and 2) for all CAR T-cells
The iTANK platform	Boosting CAR T-cells so that they give rise to a parallel broad cancer attack via CD8+ T cells	CAR T-cells perform poorly in solid tumors		
Oncolytic viruses/OV	Viruses that selectively infiltrate, and propagate in, cancer cells but not healthy cells	Selective cancer attack and natural activation of the immune system	Individual therapies insufficient, combination treatments required	Development of the next generation of OV with three combined mechanisms of action → extra activation of immune system

Table 1: Elicera's iTANK platform and drug candidates solve many problems for health care and other drug developers/potential partners.

Elicera's drug candidates can be combined with other immunotherapies such as checkpoint inhibitors (CPIs) to achieve a concurrent effect. This makes the company's CAR T-cells and oncolytic viruses of potential interest as combination therapies for many other players in immuno-oncology, especially those who are developing different treatments that inhibit the tumor's undesirable suppression of the immune system. CAR T-cells, which are under development for treatment of solid tumors, have in general encountered two major problems:

1. A hostile micro-environment in the tumor, which counteracts the function of the CAR T-cell.

2. A highly varied set of targets (antigens) in the tumor cell, which makes it difficult for the CAR T-cell to find and attack cancer.

The iTANK platform counteracts this hostile micro-environment and strengthens the function of the CAR T-cell. In addition, it activates the patient's own CD8+ T cells, which gain the ability to target the entire set of relevant targets in the tumor cells; this makes the technology platform of potential interest to every company developing proprietary CAR T-cells against different types of solid tumors.

Since all of Elicera's drug candidates give rise to a multi-stage attack on cancer through genetic modification, they have the potential to offer cancer patients broader, more effective immunotherapy. Moreover, ELC-301 has the possibility of offering continued treatment for the large proportion of patients who relapse in conventional CAR T-cell therapies and are thus beyond current treatment alternatives.

The work of Professor Essand's research group in genetic and immunotherapy against cancer has led to two ongoing clinical trials with oncolytic viruses (one of which is using ELC-100), and one concluded and one ongoing academic study with

CD19 CAR T-cells (not included in Elicera's product portfolio). These studies provide Elicera with access to valuable experience ahead of planning and implementation of the company's future CAR T-cell studies with ELC-301 and ELC-401.

Furthermore, Elicera's management group and Board of Directors has previous experience from drug development in immuno-oncology, with a focus on cell therapies. The Board's fields of expertise also include business development, health economy, regulatory strategy, business law and corporate governance in a listed environment. Additionally, the Board intends to recruit a member with valuable experience from commercial manufacture of cell therapies, including market-approved CAR T-cells.

Business concept and strategy

Elicera develops innovative immunotherapies for the purpose of prolonging the lives of, and improving the quality of life for, cancer patients. Its business concept is built on generating revenue from commercial partnerships by:

- Benefiting from the company's world-leading competence in cell and tumor immunology in order to develop drugs that address major medical needs that are not being met.
- Continuing to build on its strong patent portfolio and work up valuable know-how.
- Implementing well-designed preclinical and clinical trials for projects that can then be included in commercial partnerships with large drug and/or biotech companies.
- Outlicensing the iTANK platform to other companies that are developing CAR T-cells.

Financial information

Financial performance during the second quarter, April 1–June 30, 2021

Operating loss

Operating loss for the quarter totaled SEK -1,818,751 (-10,570), which is a change of SEK -1,808,181 compared to the year-earlier period.

The change is due entirely to increased costs.

Loss for the quarter

Loss for the quarter totaled SEK -1,818,888 (-10,570). Earnings per share totaled SEK -0.15 (-0.00).

Liquidity and cash flow

- Cash flow from operating activities totaled SEK 3,486,666 (-12,238)
- Cash flow from investing activities totaled SEK 0 (0).
- Cash flow from financing activities totaled SEK 55,300,320 (0).
- Cash flow for the quarter totaled SEK 58,786,986 (-12,238).
- At the end of the period, the company's cash and cash equivalents totaled SEK 66,870,730 (15,790).

Financial performance during the period, January 1–June 30, 2021

Operating loss

Operating loss for the period totaled SEK -4,223,302 (-15,470), which is a change of SEK -4,207,832 compared to the year-earlier period.

The change is due entirely to increased costs.

Loss for the period

Loss for the quarter totaled SEK -4,224,377 (-4,900). Earnings per share totaled SEK -0.35 (-0.00).

Liquidity and cash flow

- Cash flow from operating activities totaled SEK 5,631 (-18,038).
- Cash flow from investing activities totaled SEK 0 (0).
- Cash flow from financing activities totaled SEK 55,300,320 (0).
- Cash flow for the quarter totaled SEK 55,305,320 (-18,038).
- At the end of the period, the company's cash and cash equivalents totaled SEK 66,870,730 (15,790).

Investments

Elicera's investments for the period totaled SEK 0 (0).

Events after the end of the period

No other key events that impact the financial statements occurred after the end of the period.

Personnel and organization

The number of employees at June 30 was 1.

Elicera's organization comprises all the competence and experience that is necessary to run the company. Close collaboration has been established with a number of key consultants in patents, preclinical, clinical trials, development of pharmaceuticals, regulatory expertise for manufacture and documentation, quality assurance, finance and law.

Extraordinary General Meeting 2021

An Extraordinary General Meeting on March 18 resolved on the election of Karin Hoogendoorn as a new member of the Board of Directors for the period until the next Annual General Meeting.

Further, the meeting approved Board fees of SEK 10,000 per month for the period from September 2020 until the Annual General Meeting for 2021 for Chairman of the Board Agneta Edberg and SEK 7,500 per month for Board members Christina Herder, Jan Zetterberg and Margareth Jorvid.

Annual General Meeting 2021 and Annual Report

The Annual General Meeting was held digitally on April 26. The AGM resolved to re-elect its Board of Directors: Agneta Edberg (chair), Magnus Essand, Christina Herder, Margareth Jorvid, Jan Zetterberg and Karin Hoogendoorn as ordinary members and Di Yu as deputy member.

Board fees remained unchanged at SEK 10,000 a month for Chairman of the Board Agneta Edberg and SEK 7,500 for the other members.

RSM, with signatory auditor Kristoffer Håkansson, was re-elected as auditor.

Risks and uncertainties

In addition to the general uncertainty related to research and development operations, the coronavirus and delays in the start of clinical trials, there are no known tendencies, uncertainties, potential receivables or other demands, commitments or events that could be expected to have a material impact on the company's future prospects.

A detailed account of various risks is presented on pages 31–35 of the 2021 Prospectus. In addition, they are described in the 2020 Annual Report (pages 28–29).

Equity

Equity was impacted by the new share issue from the preceding year and earnings during the period. At June 30, equity totaled SEK 61,311,999 (598,632).

The share

In May, a new share issue of 7,750,000 new shares and 7,750,000 warrants (TO1) was conducted at a value of SEK 8.00. In total, Elicera received SEK 55.3 million less issue expenses.

Teckningsoptionen (TO1) ger för varje två (2) optioner rätt att under perioden 1 november-30 november 2022 teckna en (1) ny aktie till kurs 11,60 SEK. Fullständiga villkor finns tillgängliga på Bolagets hemsida, www.elicera.com.

The Elicera share was listed on Nasdaq First North Growth Market on 11 June. The share will be managed by Euroclear.

G&W Fondkommission was appointed Corporate Advisors.

Loss after tax divided by the average number of shares for the period totaled SEK -0.35 (-0.00) for the reporting period. At June 30, 2021, Elicera had about 2,000 shareholders shareholders. The number of shares on July 1 was 19,782,000.

NAME	NUMBER OF SHARES	SHARE OF VOTES/CAPITAL (%)
Magnus Essand	3,302,375	16.69

Accounting policies

This interim report has been prepared in accordance with K3 (K2 for previous years). The change from K2 to K3 in 2020 did not have any impact on the income statement and balance sheet.

The accounting principles are presented on page 35 of the 2020 Annual Report.

Audit

This interim report has not been audited.

Assurance of the Board of Directors

The Board of Directors and CEO give their assurance that this interim report provides a true and fair overview of the company's operations, financial position and earnings, and that it describes the material risks and uncertainties faced by the company.

Gothenburg, August 20, 2021
