We want you to grow with us

Hello! Would you like to join a startup where your passion and creativity will matter more than your title or tenure? A place where everyone communicates at eye-level? An environment where sharing is the focus above all? LivingPackets might be the place for you.

Since 2016, we've been developing the most advanced, smart, secure, and sustainable packaging solution ever: THE BOX. Robust and reusable, with a whole range of services and systems supporting it, we believe it will change the e-commerce industry. Having grown from a small research group in France to an international team of over a hundred brilliant, passionate, and creative minds, we are now very close to our next goal: mass production. We want to reinvent packaging and logistics, and reimagine the e-commerce industry. We want to drive the world towards a fairer, circular profit-sharing economy. Will you join us?

Security Architect (m/f/d)

We offer

→ A real cause: help save the world from cutting down millions of trees, cardboard and plastic waste, and transform it into a circular profit sharing economy.
→ The unique chance to be directly involved in the growth phase of LivingPackets.
→ A flexible work culture with a focus on growth, passion, fairness, and environmental awareness. A place where your initiative and hard work is valued more than anything else.
→ An international team of exceptionally talented, motivated, creative and dedicated people.
→ The option to work in our Berlin, Paris or Nantes offices, or remotely

You bring

→ A BA/BS degree in Computer Science or equivalent work experience
→ CISSP/CCSP/CSSLP certification is a bonus
→ Multiple years of experience in a security or information technology related field, information security and IT risk management
→ Expert knowledge/background in secure code authentication/ attestation and chains of trust
→ A deep understanding of security engineering principles and best practices relating to PKI compliance, network/systems security, encryption and identity access management
→ In-depth knowledge of security protocols such as OAuth2, OpenID, x.509, TLS, TCP/IP, SSH
→ Fundamental understanding of security regulations such as PCI, GDPR, ISO27001
→ Working knowledge of Go, NodeJS, Python, C/C++, Rust or other languages
→ Strong knowledge of threat detection, identification and remediation
→ Experience deploying security solutions within cloud environments such as AWS, Azure, GCP
→ Experience with Containers and K8s
→ The ability to solve security problems with multiple solutions and thoroughly explain the risks and tradeoffs of each.
→ Fluency in English is required
→ German and French are a major plus
→ Strong communication skills

Your responsibilities

→ Eventually build a team that can share responsibilities with you
→ Leading from the front in the implementation of security best practices
→ Builds practices and procedures to deliver security by design as a core principle in software development
→ Design, prototype, and implement security solutions that solve challenges relating to PKI compliance, authentication/authorization, and encryption key management
→ Build low-cost, efficient, and scalable security solutions across our cloud and IoT environments
→ Solve security problems through tactical synthesis of core infrastructure, code, and automation
→ Serve as go-to security advisor to various engineering teams across the company
→ Mentor developers on designing for security and privacy within our applications
→ Respond to and troubleshoot relevant security incidents within our infrastructure
→ Perform code reviews to ensure they are up to our security standards
