

We want you to grow with us

Hello! Would you like to join a startup where your passion and creativity will matter more than your title or tenure? A place where everyone communicates at eye-level? An environment where sharing is the focus above all? LivingPackets might be the place for you.

Since 2016, we've been developing the most advanced, smart, secure, and sustainable packaging solution ever: THE BOX. Robust and reusable, with a whole range of services and systems supporting it, we believe it will change the e-commerce industry. Having grown from a small research group in France to an international team of over a hundred brilliant, passionate, and creative minds, we are now very close to our next goal: mass production. We want to reinvent packaging and logistics, and reimagine the e-commerce industry. We want to drive the world towards a fairer, circular profit-sharing economy. Will you join us?

Sr. Embedded Developer (m/f/d)

We offer

- A real cause: help save the world from cutting down millions of trees, cardboard and plastic waste, and transform it into a circular profit sharing economy.
- The unique chance to be directly involved in the growth phase of LivingPackets.
- A flexible work culture with a focus on growth, passion, fairness, and environmental awareness. A place where your initiative and hard work is valued more than anything else.
- An international team of exceptionally talented, motivated, creative and dedicated people.

You bring

- A passion for technology
- Embedded development and C/C++ experience
- The ability to write computationally efficient and fail-safe firmware
- Willingness to learn new programming languages if necessary
- An ability to quickly adapt to changes in requirements
- An organized, motivated and independent working style
- Preferably, experience with:
 - Embedded architectures including sensors
 - LTE and Bluetooth LE modules and protocols
 - CI/CD for embedded development
 - Backend development experience
- Fluency in English is required
- German, french or other languages are the cherry on the top

Your responsibilities

- You implement and develop software according to defined criteria
- You specify and implement unit and integration testing
- You assess operational risks of firmware regarding business cases
- You support hardware development in SPI and I2C
- You maintain and further develop of existing products
- You define and implement relevant communication interfaces
