Care and Maintenance

What kind of material is Loll made out of again?

Loll products are made from 100% recycled high-density polyethylene (HDPE) which is the same material as the #2 plastics (i.e. milk jugs, etc) that you take out to the curb every week.

What about the sun?

The sun is very hard on materials that have constant direct exposure and we cannot guarantee the material will not change over time. However, the HDPE that Loll uses has a UV stabilizer and is very resistant to fading. Darker colors are more resistant than lighter colors. The color is not a finish coat; it is a pigment embedded in the material.

Some pieces use Richlite natural paper composite. Richlite will patina as it weathers and the lighter, natural colored material will redden or turn grayish. Black will remain black for years but with some apparent weathering. You will never have to paint or stain Loll Furniture.

What kind of maintenance will I have to do to keep my Loll Furniture looking good?

NONE! Loll furniture will not warp, rot, require paint or stain or any ongoing maintenance to keep its beautiful appearance. It is a good idea to occasionally inspect the furniture fastening to ensure bolts are not loosening. Daily expansion and contraction caused by heating and cooling can occasionally loosen hardware.

How should I clean my Loll Furniture?

Mostly you will find a simple hose-off will do the trick. If there is a little more dirt, a simple wet rag and natural spray cleaner should be sufficient to keep Loll furniture clean. Microfiber towels work great! If there is dirt embedded in the texture, you can do well with a mild soap and water and a stiff but gentle bristled brush. You can also power wash your furniture if you like that sort of thing.

Graffiti Removal: Removing graffiti is a very simple task. Since the HDPE material we use is non porous, paint does not penetrate the surface. We recommend using a citrus cleaner. The citrus cleaner that we used calls to be sprayed on and left for

20 - 30 seconds. After the cleaner has had time to loosen the paint, it wipes off of the side panel with ease. Do not use petroleum based cleaners as they will “eat” the plastic.

What else should I know?

Our products generally ship knocked down with light assembly required. Why do we do this? It saves our customers shipping costs as well as lessens the probability for shipping damage. If you have questions on assembly, see www.lolldesigns.com for assembly instruction and videos. Or call us!

Best – our products assemble with our unique *lock block* system which allows us to hide our fasteners and provide a clean surface. If a part is ever damaged, we can simply send you a new part rather than replace the whole product.
