

Secure Your Network as You Scale

WHAT WE DO

Our end-to-end monitoring and mitigation solutions easily incorporate into existing workflows

From multilayered DDoS protection and Zero Trust to SASE, container, and CDN security, we offer a holistic suite of solutions.

About Us

Our purpose is to ensure that companies everywhere recognize the impact of cybersecurity and take control to protect their software development environments.

WAF/NXGN-WAF

WAFs protect your web based applications from common vulnerabilities by applying a set of rules to HTTP traffic and blocking actions it judges as suspicious.

Zero Trust Security

Strengthen and streamline your organization with a Zero Trust framework: Optimize resources, ensure compliance, and boost productivity while enhancing security.

Cloud Security Compliance

One platform for multi-cloud and Kubernetes: Continuously monitor configurations to uncover risks and demonstrate compliance.

DDoS

Comprehensive, multilayered DDoS Protection: Advanced analytics monitor hundreds of thousands of parameters to shield against known and zero-day attacks.

SASE

SASE: A single, cloud-native solution that unifies networking and security, focusing on identity over traffic for global protection.

Content Delivery Network

CDN Security: Guard against web threats while enhancing visitor experience through secure, high-speed content delivery.

Enhancing Security Posture

At Opticca Security, we specialize in providing advanced services to improve your security posture and meet regulatory requirements. Our security experts are equipped to assist you in formulating a risk management strategy, incident response, and everything in between.

Empowering Security Champions

We empower your security champions by providing them with the necessary tools and knowledge to ensure the resilience of your applications. Our services enable you to build an AppSec culture and enforce custom security rules, configurations, and advanced threat detection.

Opticca Security is dedicated to helping you secure your apps. Our managed services enable you to focus on your core business while we handle the complexities of application security. With our expertise and best-in-class technologies, you can trust us to protect your data and build resilience.
