

Managed Services: Extending your team with fully managed cyber security solutions

Your business works tirelessly to achieve its goals, but so do the criminals who want access to your data. Attacks continue to increase in frequency and complexity, and cybercrime has proven to be a lucrative 24/7 industry that often exploits businesses indiscriminately. Although you can't work around the clock to defend your organization, *we can*.

A successful cyber security approach involves multiple layers of protection across all your devices, programs, networks and systems. We offer **fully managed services** to provide advanced detection, incident response and recovery against emerging cyber security vulnerabilities and threats.

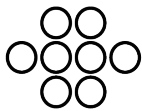

Our best-of-breed next-gen MDR and XDR services combine human expertise with innovative automation, machine learning, and threat intelligence to help you build confidence, safeguard what's important, and secure your environment.

Managed WAF Services

WAF-as-a-Service offers the advanced security capabilities of a Web Application Firewall without having to worry about the complexities of managing and maintaining your own WAF infrastructure. This can save you time, resources, and money while providing reliable, scalable, and effective protection for your web applications and APIs.

Managed CDN Services

CDN-as-a-Service offers the advanced capabilities of leading public CDN technology but on your own private network, including Dynamic Site Acceleration, request collapsing, instant invalidation, real-time service provisioning, livestream and on-demand video, image manipulation, real-time visibility, and security. You get comprehensive CDN engineering without having to worry about building and maintaining the functionality in-house.

Managed Application Security Services

AppSec-as-a-Service delivers continuous, real-time monitoring and assessment of your software applications with actionable risk mitigation recommendations tailored to your application stack. Instead of generic solutions, your business receives specific strategies to counter identified vulnerabilities, ensuring a more effective and timely response. With detailed insights into the threat landscape specific to your applications, your team can allocate resources and budget more efficiently, focusing on high-risk areas and maximizing ROI.

Managed Zero Trust Services

ZTS-as-a-Service delivers a system of user access control for your staff and supply chains by authenticating use to each application individually rather than the network as a whole. Once established, we keep the solution running with the latest patches and security updates, provide configuration backups, conduct regular system checks to ensure system integrity and availability, provide ongoing configuration changes, and deliver periodic reviews and updates to access policies based on evolving security requirements.

Ensure cybersecurity excellence

Build a more efficient and robust cyber security ecosystem with Opticca Security, your consultative partner. With established relationships with leading cyber security vendors like Cloudflare, ShiftLeft, Snyk, and Sonatype, we can deliver solutions that pair best-in-class technology with your strategic objectives.

As you navigate the security challenges of widening access to your systems and data, we're here to help — now and as your needs evolve.
