

Replacement Gasket

This replacement gasket may be of a different material from the original gasket installed in your unit. This gasket may not exactly match the original, but will function properly.

Installation Instructions

Tools Needed:

Pliers

Flat Screwdriver

Dollar Bill

Remove door, disconnecting wires if necessary. Using pliers, pull the original gasket from the door channel. Using a flat screwdriver, pry the metal strip that holds the gasket to widen the groove between it and the door lip so that the new gasket can be inserted. Insert the new gasket into the door channel. Then using pliers, squeeze metal strip and door lip together to tighten the gasket in place. Reattach door to unit.

Gasket Test:

Place dollar bill between door and unit. Close door. Dollar bill should be tight between door and gasket. Adjust gasket as needed to create good seal.
