KINSHOFER manufactures rotators for truck loaders, excavators and logging operations. Years of experience in designing rotators and hydraulic load handling equipment guarantee high efficiency, long lasting rotators, specially tailored to meet your requirements.

The gear-type design ensures a very compact and powerful rotator. The precision control and braking ability is especially appreciated by operators. A grapple does not rotate unexpectedly when digging, even under maximum load, and there is no need for stability compensation when handling longer lengths of timber...

These are only some of the many working situations where operators appreciate the advantages of using **KINSHOFER**-rotators.

KINSHOFER-Rotators are the solution.

Features of the KINSHOFER-Rotators

Rotator with shaft up to 3000 kg load capacity (incl. fittings)

KM 04 F140-30-4

KM 10 F173-35-1

KM 501 – Upper suspension between rotator and crane

An upper suspension is a cardan link between rotator and crane. It is available for all current makes and models of cranes. Please specify dimensions when ordering.

Type	Load capacity (kg)	Self weight (approx. kg)
KM 501 3000	up to 3000	5
KM 501 4500	up to 4500	10
KM 501 6000	up to 6000	15
KM 501 10000	up to 10000	25

KM 511 – Upper suspension with pendulum damper between rotator and crane

A pendulum damper reduces the horizontal swing of the attachment. It can also be retrofitted to an existing upper suspension.

Type	Load capacity (kg)	Self weight (approx. kg)
KM 511 4500	up to 4500	15
KM 511 6000	up to 6000	20
KM 511 10000	up to 10000	30

KM 206 – Hose guard

The hose guard is a metal bow to be attached onto the rotator. It is designed to protect the hoses of the rotator from damage i.e. from protruding branches.

Type	Self weight (approx. kg)
KM 206 hose guard for the rotator	3

KM 502 – Reduction link between rotator and grapple

A reduction link adapts a shaft type rotator to an attachment with a standard hole pattern for a flange (KM 502).

Type	Load capacity (kg)	Self weight (approx. kg)
KM 502 3000	up to 3000	2
KM 502 4500	up to 4500	3

KM 460 03

KM 460 04

KM 505 – Quick change system for shaft-type rotators up to 4000 kg load capacity

The quick change system enables an easy exchange between different attachments. The mechanical coupling and locking is achieved by the turning motion of the rotator. You simply disconnect the quick couplings and disengage the locking device manually. The upper element of the quick change system is available for all **KINSHOFER** 4t-shaft rotators. The KM 505 system allows the easy exchange between pallet fork and brick stack grapple for example - not suitable for heavy duty work.

Type	Description	Hole pattern of flange (mm)	Self weight (kg)
KM 505	complete, incl. hydraulic couplings (KM 204 01)	4x Ø18 / □ 140	12
KM 505 01	upper element fitted to rotator incl. 2 mobile parts		5

KM 505 03

KM 505 HD – Heavy duty quick change system for shaft-type rotators

The quick change system enables an easy exchange between different attachments. The mechanical coupling and locking is achieved by the turning motion of the rotator. You simply disconnect the quick couplings and disengage the locking device manually. The upper element of the heavy duty quick change system is available for the **KINSHOFER** shaft rotators KM 04 S68-30US or KM 06 S68-40. The KM 505 system allows the easy exchange between pallet fork and clamshell bucket for example - especially developed for the heavy duty task with clamshell buckets.

Type	Description	Hole pattern of flange (mm)	Self weight (kg)
KM 505 HD	complete, incl. hydraulic couplings (KM 204 01)	4x Ø18 / □ 140	18

Fully hydraulic Quick Change Device

KM 506 HD SMARTFLOW

The new fully hydraulic quick change device for loader crane attachments allows for a fast exchange of hydraulic or mechanical tools at the truck crane without any manual works at attachment or rotator.

- **Fast and easy!** No manual reconnection of the hoses necessary anymore when changing the attachment!
- **Lower part with or without hydraulics** available, depending on the use of a hydraulically or mechanically operated attachment.
- **Available for Kinshofer rotators** KM 04 S68-30US, KM 06 S68-35 and KM 06 S68-40.
- **Robust and compact construction** – short hose connection to the hydraulic attachment are connected directly to the lower part of the quick change device.
- **Weather protection cap** available to protect the quick change device lower part when not connected to the upper part.
- **Non-rotating load hook** also available.
- **Matching all crane attachments** with flange hole pattern □140mm.

The technically unique KM 332 brick stack grapple is a versatile tool for palletized and non-palletized materials.

- **Rigid or adjustable plunge depth** of parallel opening and closing clamping arms - hydraulically operated.
- **Versatile tool** with opening range of 400 mm to 1400 mm i.e. for handling of single concrete products like curbstones, or handling of brick packs.
- **Handling of heavy loads** with reinforced version **KM 333**.
- **Adjustable plunge depth** of **KM 332V** and **KM 333V** can match the size of the stack-easy adaption with a mechanical latch.
- **Precise synchronisation of the arms** as a result of two in series double acting hydraulic cylinders.
- **Safety** through internal pressure relief valve (independent from crane pressure) and non-return valve (safe clamping force at pressure drop).
- **Long life** due to generously dimensioned bearings, integrated grease reservoir, automatic wear compensation of main bearing, spherical central bearing for the cylinders.
- **Easy to use** with durable and replaceable rubber inserts – simple to operate between the stacks.

Pallet Fork with tines adjustable by spindle

KM 401

The efficient pallet fork KM 401 with a spring loaded centre of gravity can easily be adapted to different loads with adjustable plunge depth and adjustable tine spread.

- **Efficient handling** of many different kinds of loads like stone or brickstack, protection trellis or other general cargo is possible due to the easy adjustment with a stainless steel-plastic-sliding guide in the upper part.
- **Versatile height** from 1050 mm to 1650 mm adjustable in three steps with a lock pin.
- **Versatile width** from 1050 mm to 1650 mm adjustable in three steps with a lock pin.
- **Versatile width** of tines from 475 mm to max. 835 mm adjustable with a smooth running, stainless spindle.
- **Easy to use** due to the dimensions of the pallet fork. Since no part of the pallet fork is wider than a standard pallet, a second row can be loaded and loads close to walls can also be handled without problems.

**KM 460
protection trellis**

The protection trellis is used to secure loose loads handled with pallet forks KM 415 and KM 414 – e.g. brick packages, loose construction materials. When handling loose material, a protection trellis or net to secure the load, is obligatory (EN 13155). The maximum capacity is 2000 kg. The protection trellis can be mounted within a few minutes and is thus suitable for each construction site without any problems.

KM 415

The robust pallet fork KM 415 with spring loaded centre of gravity compensation can easily be adapted to different loads with adjustable plunge depth and adjustable tine spread.

- **Efficient handling** of many different kinds of loads in an economic, one-man operation is possible due to the automatic shifting of the KM 415 to a preset position. Compression springs return slide to initial position.
- **Throat height adjustable in steps** from 1050 mm to 1650 mm with a lock pin.
- **Tine spread adjustable in steps** from 325 mm to max. 975 mm with a lock pin.

**KM 460
protection trellis**

The protection trellis is used to secure loose loads handled with pallet forks KM 415 and KM 414 – e.g. brick packages, loose construction materials. When handling loose material, a protection trellis or net to secure the load, is obligatory (EN 13155). The maximum capacity is 2000 kg. The protection trellis can be mounted within a few minutes and is thus suitable for each construction site without any problems.

The robust pallet fork KM 414 with manual centre of gravity compensation is an economic alternative.

- **Manual change of position of shifting collar** by the operator.
- **Suspension Ring** for **KINSHOFER** flange or shaft rotator, or for a crane hook is included in the package.
- **Throat height adjustable in steps** from 1050 mm to 1650 mm with a lock pin.
- **Tine spread adjustable in steps** from 325 mm to max. 975 mm with a lock pin.

Pallet Fork with tines adjustable by lock pin

KM 414T

The robust telescopic pallet fork KM 414T with manual centre of gravity compensation is an economic alternative due to its versatility. Besides the properties of the regular KM 414 pallet fork, the KM 414T additionally features the possibility to extend to a height of up to 2500 mm.

- Manual change of position of shifting collar by the operator.
- Suspension Ring for **KINSHOFER** flange or shaft rotator, or for a crane hook is included in the package.
- Throat height adjustable in steps from 1100 mm to 2500 mm with a lock pin.
- Tine spread adjustable in steps from 345 mm to max. 975 mm with a lock pin.

Thanks to the universal extensions for the pallet forks KM 401(H), KM 414 and KM 415, the throat height of each of these types can be extended by 750 mm or 1200 mm respectively.

- **Fast mounting** due to easy positioning of the extension by lock pin between upper and lower part of the respective pallet fork.
- **Throat height adjustable in steps** with a lock pin. The general throat height can be extended by the extension but also removed easily.
- **Adjustable tine spread** and all other functions of the pallet forks remain untouched.
- **Ideally adjusted** to the respective load capacity/centre of gravity of the pallet fork.
- **Two lengths available:** 750 mm or 1200 mm.

Technical Drawings

The universal fork KM 461 for loader cranes handles wallboards and other lying building materials up to a size of 1250 height and 460 mm depth.

- **Different tine spreads:** besides the standard tine spread of 640-1600mm further tine spreads are available (up to 1000, 1830 or 2130 mm), depending on the sheets that have to be handled.
- **Safe transport** of sheets of wallboard in the hinged lower section. The boards can be lifted and folded into a vertical position and clamped between the tines and frame, preventing them from sliding during handling.
- **Protection of the sheets** during unloading through semi-tapered forged tines, equipped with rollers and pads. A standard centre slide gives an additional support point for your loads.
- **Security** is assured even in case of a drop in pressure due to the integrated counterbalance valve that prevents the fork from opening unintentionally. The hydraulic cylinder is equipped with a pressure relief valve to prevent overload.
- **Accurate positioning** of the load is ensured by the tilt cylinder and the **KINSHOFER** rotator.
- **The special version of the universal fork, the KM 461A** with a second suspension point on the main beam enables the unloading of lying boards through narrow openings in the wall.

Technical Drawings

The hydraulic drive unit **HPXdrive Standard**, characterized by its constant closing force, is optimally suited for daily operations in general construction, civil engineering and land-scaping. Thanks to its constant closing force of 34 kN, the HPXdrive Heavy Duty is ideal for difficult tasks.

In contrast to conventional hydraulic grabs, with the **HPXdrive** the torque is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. The force is delivered to two shafts, on which the shells are mounted.

These advantages of the **HPXdrive** - technology provide an extended service life and higher efficiency.

The compact design of the **HPXdrive** without open greasing points allows for operations in water protection areas, as no lubricant can be washed out.

OPTIMAL WEIGHT &
COMPACT DESIGN

The bucket shells are bolted to the shafts and therefore easy to replace by another set. Different types of shells for diverse applications can be refitted onto the driving unit, e.g. clamshell bucket with or without open shells, multi purpose grab and rock and timber grab.

The **HPXdrive Standard** as an allround unit is perfect for the daily routine jobs. The advantages of the **HPXdrive**-technology – the constant high closing force and the compact design – guarantee a long life and reliability.

The standard rotator of the **HPXdrive Standard** is the **KINSHOFER** rotator with flange KM 04 F140-30V. In case a quick change to a non-rotating hook is necessary, the **HPXdrive** can be delivered with the **KINSHOFER** shaft rotator KM 04 S in combination with either the quick change system KM 505 or the reduction link KM 502.

Technical Information HPXdrive Standard:

Package consists of: upper suspension KM 501 4500, rotator KM 04 S, quick exchange system KM 505, connecting hoses KM 203 01, drive unit **HPXdrive Standard** with pressure relief valve and non-return valve

Self weight: 170 kg

Height: 575 mm

Note: for heavy duty tasks we recommend the quick change system KM 505 HD in combination with KM 04 S68-30US

Please note: The drive unit **HPXdrive Standard** can only be used in combination with **KINSHOFER** Rotator and Shells.

Exchangeable Shells

HPXdrive Standard

The bucket shells of the **HPXdrive Standard** are bolted to the shafts, and therefore it is very easy to replace them with another set of shells. Different types of shells for different applications can be refitted onto the driving unit, e.g. clamshell bucket, rock grapple, timber grapple, hay and forestry grapple and multi purpose clamshell. Other types of shells are available on request.

The interchangeable shells are delivered with an exchange aid that guarantees the **HPXdrive Standard** can be positioned with ease.

Package consists of: exchangeable shells, bolt-on teeth (for KM 604HPX, KM 626HPX), exchange aid kit

Please note: The drive unit **HPXdrive Standard** can only be used in combination with **KINSHOFER** Rotator and Shells.

An allround clamshell bucket using the *HPXdrive Standard* for digging and handling, the KM 604HPX is ideal for the daily routine work. The revolutionary *HPXdrive* technology guarantees a reliable and low maintenance attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** with different types of shells that can easily be refitted onto the unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Precise handling** with the gear-type **KINSHOFER** rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Rotator with shaft** is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- **Constant closing force** (19 kN at 26 MPa operating pressure) over the entire opening and closing process.

Small Volume Clamshell Bucket with *HPXdrive*

KM 626HPX

The KM 626HPX with the *HPXdrive Standard* for digging and handling, is due to its size ideal for small cranes. The revolutionary *HPXdrive* technology guarantees a reliable and low maintenance attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Precise handling** with the gear-type **KINSHOFER** rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Rotator** with shaft is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- **Constant closing force** (31 kN at 26 MPa operating pressure) over the entire opening and closing process.

26 - 37 MPa (260 - 370 bar) at max. 40 l/min

Technical Drawings

The KM 604U HPX is a clamshell bucket using the *HPXdrive Standard* for handling and easy digging tasks. The open shells enable the handling of bulky materials. Non-return valve, pressure relief valve, welded hooks and reversible wear plates are delivered on each grapple. The revolutionary *HPXdrive* technology guarantees a reliable and low maintenance attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!

Operating pressure at oil flow:

26 MPa (260 bar) at max. 75 l/min

26 - 37 MPa (260 - 370 bar) at max. 40 l/min

Technical Drawings

The **HPXdrive Heavy Duty** is a powerful version for difficult tasks. The advantages of the **HPXdrive**-technology – the constant high closing force and the compact design – guarantee a long life and reliability.

The standard rotator of the **HPXdrive Heavy Duty** is the **KINSHOFER** rotator with flange KM 04 F140-30V. In case a quick change to a non-rotating hook is necessary, the **HPXdrive** can be delivered with the **KINSHOFER** shaft rotator KM 04 S in combination with the quick change system KM 505 or the reduction link KM 502.

Technical Information HPXdrive Heavy Duty:

Torque (at 32 MPa):
21000 Nm

Operating pressure at oil flow:
max. 32 MPa (320 bar) at 40 - max. 90 l/min
⚠ **Mind the pressure!**

HPXdrive Heavy Duty with Flange Rotator HPX-HD-04F-30V

Package consists of: upper suspension KM 501 4500, rotator KM 04 F140-30V, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 195 kg

Height: 510 mm

HPXdrive Heavy Duty/502 with Shaft Rotator and Reduction Link HPX-HD-502

Package consists of: upper suspension KM 501 4500, rotator KM 04 S, reduction link KM 502 4500, short connecting hoses KM 203 01, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 200 kg

Height: 565 mm

HPXdrive Heavy Duty/505 with Shaft Rotator and Quick Change System HPX-HD-505

Package consists of: upper suspension KM 501 4500, rotator KM 04 S, quick change system KM 505, short connecting hoses KM 203 01, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 205 kg

Height: 605 mm

Note: for heavy duty tasks we recommend the quick change system KM 505 HD in combination with KM 04 S68-30US

Please note: The drive unit **HPXdrive Heavy Duty** can only be used in combination with **KINSHOFER** Rotator and Shells.

Exchangeable Shells

HPXdrive Heavy Duty

The bucket shells of the **HPXdrive Heavy Duty** are bolted to the shafts, and therefore it is very easy to replace them with another set of shells. Different types of shells for different applications can be refitted onto the driving unit, e.g. clamshell bucket, rock grapple, timber grapple, hay and forestry grapple. Other types of shells are available on request.

The interchangeable shells are delivered with an exchange aid that guarantees the **HPXdrive Heavy Duty** can be positioned with ease.

Package consists of: exchangeable shells, bolt-on teeth (for KM 605HPX), exchange aid kit

A powerful clamshell bucket with the *HPXdrive Heavy Duty* manages even difficult tasks thanks to its high closing force – ideal for digging and handling. The revolutionary *HPXdrive* technology guarantees a reliable and low maintenance attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Precise handling** with the gear-type **KINSHOFER** rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Rotator with shaft** is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- **Constant closing force** (34 kN at 32 MPa operating pressure) over the entire opening and closing process; high efficiency provided by hydro static bearings of the axes.

Heavy Duty Clamshell Bucket with *HPXdrive*

KM 605HPX-Z

The KM 605 HPX-Z universal grapple with integrated flap rests flat and safe against the crane arm in its transport position. The special flap at the shell carrier allows to transport a large universal grapple, whereat the grapple does not protrude the carrier machine's width (2,55 m)* – without any loss in loading volume. The flap is secured automatically by a robust pressure piece with rubber bump.

- **Reliability** of the *HPXdrive*. The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Profitability** through low maintenance costs and longer life cycle.
- **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- **Precise handling** with the gear-type **KINSHOFER** rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Constant closing force** (34 kN at 32 MPa operating pressure) over the entire opening and closing process; high efficiency provided by hydro static bearings of the axes.

* depending on crane kinematics and mounting

The KM 605U HPX is a powerful clamshell bucket using the *HPXdrive Heavy Duty* for handling and easy digging tasks. The open shells enable the handling of bulky materials. Non-return valve, welded hooks and reversible wear plates are delivered on each grapple. The revolutionary *HPXdrive* technology guarantees a reliable and virtually maintenance free attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication:** The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.

- **Precise handling** with the gear-type **KINSHOFER** rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Rotator with shaft** is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- **Constant closing force** (28 kN at 32 MPa operating pressure) over the entire opening and closing process; high efficiency provided by hydro static bearings of the axes.

Small Volume Clamshell Bucket with Horizontal Cylinders

KM 626

The KM 626 is the ideal solution for light weight loader cranes in daily routine work – robust, effective, budget priced.

- **Maximum loading height** is achieved through the compact design with the horizontal double-cylinder.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Good digging behaviour** through the closely positioned shell pivots.
- **Excellent digging characteristics** are a result of high closing forces (27 kN at 26 MPa operating pressure).
- **Long life** is ensured through the use of 500 HB steel in the manufacture of the cutting edges.
- **Reduced wear out** due to a generously dimensioned bearing system; service-friendly design.

Operating pressure at oil flow:

26 - 32 MPa (260 - 320 bar) at 40 - max. 75 l/min

Technical Drawings

The rugged clamshell bucket KM 605 is recognized as successful synthesis of form, function and performance.

- **Maximum loading height** is achieved through the compact design with the horizontal hydraulic cylinder.
- **Long life is ensured** through the use of 500 HB steel in the manufacture of the cutting edges and a generously dimensioned bearing system.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Excellent digging characteristics** are a result of high closing forces (30 kN at 26 MPa operating pressure).

Technical Drawings

The KM 605U is a robust clamshell bucket and versatile tool for handling all kinds of refuse material. The open sides of the grapple enables the grab of bulk material.

- **Compact design** with a horizontal hydraulic cylinder achieves a maximum loading height.
- **Long life** due to the use of 500 HB steel in the manufacture of the cutting edges and a generously dimensioned bearing system.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Safety** is assured in the event of an unexpected pressure drop due to the integrated non-return valve.
- **Wear plates** (reversible) and **welded hooks** are delivered on each grapple.
- **Powerfull operation** due to high closing force (28 kN at an operating pressure of 26 MPa).

Requirements of Truck Crane

Operating pressure at oil flow:
26 - 32 MPa (260 - 320 bar) at 40 - max. 75 l/min

Technical Drawings

A robust clamshell bucket for handling loose material as sand, gravel, soil – perfectly matched to heavy duty work on vehicle mounted cranes.

- **Excellent filling characteristics** of the rugged grapple due to the special shape of the buckets and the wide separation between their axes that enables wide opening.
- **Practically no “left overs”** of the material to be picked up as the working edges are vertical when the buckets are open and allow a deep plunge into a pile of material.
- **High stability** through reinforced buckets, torsion-free frame, generously dimensioned bearing system and the use of 500 HB steel in the manufacture of cutting edges.
- **Combination of compensator mechanism and cylinder guard** has many advantages: parallel action, longer life for piston rod and seals, significant weight savings.
- **Efficient handling** with high closing forces (28 kN at an operating pressure of 26 MPa).

Clamshell Bucket with Horizontal Cylinder and Narrow Carrier

KM 622

The high volume clamshell bucket KM 622 has a significant narrow frame and can therefore fulfill small digging tasks besides the handling.

The KM 622S is a reinforced version with a strong 6t- or 10t-rotator.

- **Suitable for digging** due to the narrow frame.
- **Compact design** due to the narrow frame enables manual filling of the bucket without obstacles.
- **Practically no „left overs“** of the material to be picked up as the working edges are vertical when the buckets are open and allow a deep plunge into a pile of material.
- **High stability** through reinforced buckets, torsion-free frame, generously dimensioned bearing system and the use of 500 HB steel in the manufacture of cutting edges.
- **Combination of compensator mechanism and cylinder guard** has many advantages: parallel action, longer life for piston rod and seals, significant weight savings.
- **Efficient handling** with high closing forces (KM 622: 20 kN at 26 MPa / KM 622S: 29 kN at 24 MPa operating pressure).

The KM 603 is a proven grapple for daily routine work – ideal for excavating foundations, trenches and other similar applications in civil engineering. The closely positioned shell pivots ensure good digging behaviour and high closing pressure.

- **Good digging behaviour** through the closely positioned shell pivots.
- **Longevity** is ensured through the use of 500 HB steel in the manufacture of cutting edges and the generously dimensioned bearing system. The enclosed hydraulic cylinder (in a hub unit) and short hydraulic connection hoses lower the risk of damage and down-time.
- **Maximum loading height** is achieved through the compact design.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Excellent digging characteristics** are the result of high closing forces (20 kN at an operating pressure of 26 MPa).

→ Alternatively to the KM 603 the KM 604HPX can be used with an extension for excavating

Heavy Duty Clamshell Bucket with Vertical Cylinders

KM 607

The powerful clamshell bucket KM 607 with two vertical hydraulic cylinders is ideal for heavy digging work in grown soil.

- **Good digging behaviour** due to good plunge behaviour and proven shell geometry.
- **Long life** is ensured through the use of 500 HB steel in the manufacture of cutting edges and the generously dimensioned bearing system. Piston rod protection for the vertical hydraulic cylinders are standard.
- **Synchronised bucket movements** due to sturdy compensation rods.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Excellent digging characteristics** are the result of high closing forces (32 kN at an operating pressure of 26 MPa).

The reliable asymmetric orange peel grapple KM 652/2 with half closing tines provides for an easy transport, resting flat against the crane arm and not protruding the width of the carrier machine. It is mainly used for handling scrap, waste and construction materials, and is available with 5 (KM 652-5/2) or 6 tines (KM 652-6/2) – depending on the task.

- **Asymmetric construction:** the grapple rests flat against the crane arm in its transport position (see below drawing).
- **Special slot on the main carrier** allows the transport of a big orange peel grapple, that does not protrude the width of the carrier (2,5 m).
- **Half closing tines** by default, completely closing at the points, for handling waste, scrap, loose materials, etc.
- **Non-return valve** guarantees a secure retention of loads even when pressure drops.
- **Long service life** due to robust design – oil distributor and hydraulic hoses are protected in the center part, generously dimensioned bearings, wear-resistant shells made of 400 HB steel, cylinder with piston rod protection, stops for both end positions of tines.
- **Strong operation** due to high closing forces (13 kN at 26 MPa operating pressure).

Small orange peel grapple for the handling of bulky scrap, the KM 650 small for various applications is available with different tine shapes, different volumes (120l, 180l, 240l), with 4 or 5 tines.

- **Different tine shapes** of the KM 650 series to accomodate handling a variety of materials:
 - **KM 651:** fully closing tines for handling swarf, loose waste, soil, gravel etc.
 - **KM 652:** half closing tines for handling swarf, scrap, rubbish, waste paper etc.
 - **KM 653:** pointed tines for bulky scrap, car bodies, bundled waste paper etc.
- **Number of tines** can be chosen with 4 or 5 tines.
- **Long life** due to a solid design: the hydraulic cylinder pistons are protected by the gripping arms and the hydraulic hoses, connections and oil distributor are positioned in the robust centre section. Special wear resistant materials used in the production of the gripping arms and oversized bearings ensure a long service life for these sturdy grapples.
- **A lifting-eye** on the centre section acts as an additional stop.
- **Powerful operation** with high closing force (11 kN to 13 kN at an operating pressure of 26 MPa).

The Harvester KM 634-3Z has been developed especially for telescopic forklifts. During the sawing process, the three robust tines of the integrated grab hold the log firmly and securely. Available in two sizes.

- **Three interlocking, robust tines** made of Hardox 400 steel.
- **Automatic re-stress** of the grab during the sawing process. The re-stress can be stopped by a lever to cut e.g. single branches separately.
- **Optimum grab design** allows to clamp even very thin logs.
- Saw equipped with **automatic chain pretension and greasing**.
- Precise positioning thanks to the **KINSHOFER-rotation** with **4 motors and 2 holding breaks (KM 634-0,35-3Z)** or the **worm drive (KM 634-0,25-3Z)**. High torque.
- **Highly safe hydraulics** due to an integrated non-return valve, so the load is held safely even in the case of pressure drops.
- **8/3 solenoid valve** included to operate the grab with only one control circuit.

Pipe Grapple for Telehandlers

KM 930P

The pipe grapple KM 930P is the ideal tool to grip, lift, handle and position poles, pipes and tubes with a telehandler.

- **360° endless rotation.**
- **High load capacities** from 1000 kg up to 3000 kg can be positioned easily with the pipe grapple .
- **Precise positioning** due to an integrated rotation with two motors and two holding brakes.
(KM 930-3000P equipped with four motors).
- **A lifting-eye** on the centre section acts as an additional stop.
- **Secure retention of load** thanks to an integrated non-return valve and clamping pads at the tine tips.

KM 930-2000P

KM 930-3000P

The KM 634 is a robust and powerful tool for logs – especially for heavy duty operation. Well suited for handling single trunks.

- **Low height** with one horizontal hydraulic cylinder – especially when closed due to the interlocking arms.
- **Long service life** is ensured by the sturdy construction, high quality components and generously dimensioned bearing system. All bearing bolts are case hardened and housed in steel bearing bushes.
- **Optimised design** allows extremely small grapple diameter – ideal for handling thin timber securely. The arms open almost vertically. That enables an easy penetration into the timber stack.
- **Synchronisation** of arms due to sturdy compensation rods.
- **Protection of the hoses** for the hydraulic connections by a hose guard on the **KINSHOFER** rotator.
- **Precise positioning** of the loads is no problem in combination with the **KINSHOFER** rotator – continuous rotation, precise start and stop ability.
- **Safety** is assured in the event of an unexpected pressure drop due to the integrated non-return valve.
- The reinforced logging grapple **KM 634S** has an even more sturdy construction and is equipped with a stronger rotator.

Rail Grapple with *HPXdrive*

KM 632HPX Rail

The Rail Grapple KM 632HPX Rail with its HPXdrive is used for the loading and unloading of rails, but also, with care, handle single sleepers. A non-return valve secures constant pressure even in case of unexpected pressure drop. The revolutionary HPXdrive technology guarantees a reliable and low maintenance attachment. – The gripper is ideal for mobile loader cranes as well as for rigidly mounted loader cranes on maintenance trailers.

- **Reliability of the HPXdrive!** The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinder.
- **Longer life cycle** up to 50%! **Self-lubrication:** The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Rotator with shaft** KM 04 S is available as an alternative, in case a quick change KM 505 (or a reduction link KM 502 or e.g. for a non-rotating hook) is required.
- **Constant closing force** (34 kN at 26 MPa operating pressure) during the entire opening and closing process.

KM 632HPX Rail holding a concrete sleeper (here with optional shaft rotator and reduction piece)

Designed to handle the various demands of the rail, the Universal Railroad Grapple with vertical cylinders KM 632Rc can be used for rails and railroad ties / sleepers – and even for clearing brush.

- The Universal Railroad Grapple is **ideal for handling used sleepers or rails – single or bundled.**
- **Long service life** is ensured by the sturdy construction and high quality components.
- **Reduced wear** resulting from generously dimensioned bearing system.
- **Tine tips are vertical when the grapple is fully opened**, allowing easy loading and unloading of bundled ties – directly from gondola cars.
- **Exchangeable gears are standard** and ensure synchronized movement of tines.
- **Each arm is equipped with a heavy duty hydraulic cylinder**, providing an extremely high clamping force.
- The **gear-type continuous rotator** allows precise positioning of the grapple.
- **Safety:** a special holding valve provides a safe grip – even if pressure drops.
- **Central lifting eye:** included with 3000 kg load capacity.

Recommended oil flow (rotation):	15 - max. 50 l/min

Technical Drawings

KINSHOFER container discharge attachments with ring system or the fast **KINSHOFER** mushroom system are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation.

Container discharge unit KM 920-1 with ring system / low overall height

- Low overall height due to compact design.
- Extremely low maintenance and ecofriendly, because no bearing has to be lubricated.
- Hooks on automatically when container is lifted. Low maintenance rotator due to the use of plastic bushings.
- Protection against damage of container by automatic lift stop.
- Available with two load capacities (version A and B) .

Type	max. Lift of the hook (mm)	Load capacity (kg)	Height (incl. rotator) (mm)	Self weight* (kg)	Operating pressure at oil flow
KM 920-1 Ac	500	4500	1160	174	35 MPa (350 bar) at 40 l/min
KM 920-1-Bc	500	2500	1160	174	35 MPa (350 bar) at 40 l/min

* incl. motor / excl. upper suspension & pendulum damper

Package consists of: container discharge unit, **KINSHOFER**-rotator KM 04 F140-30LM, connecting tubes, upper suspension with pendulum damper KM 511 (4500), non-return valve

Container Discharge Unit KM 920-11 with Ring System

- Low overall height due to compact design.
- Extremely low maintenance and ecofriendly, because no bearing has to be lubricated.
- Hooks on automatically when container is lifted.
- Precise positioning with **KINSHOFER** rotator. Low maintenance rotator due to the use of plastic bushings.
- Protection against damage of container by automatic lift stop.

KINSHOFER container discharge attachments with ring system are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation.

Container discharge unit KM 920-11 for containers with ring system

- Robust mechanics with few moving parts and guided lifting hook..
- Precise positioning with **KINSHOFER** rotator, due to the use of a rotator with vertical oil ducts no externally installed hydraulic hoses are necessary.
- Pressure relief valve ensures independence of crane operating pressure.
- Protection against damage of container by automatic lift stop.

Container discharge unit KM 921 for containers with KINSHOFER mushroom system or ring system

- Combination model: without any adjustments both types of containers can be handled – with KINSHOFER mushroom system or ring system.
- Low overall height due to compact design.
- Robust mechanics with self locking spindle.
- Precise positioning with **KINSHOFER** rotator.
- Pressure relief valve ensures independence of crane operating pressure.
- Protection against damage of container by automatic lift stop and an additional height control system.

The secure service of the container discharge unit **KM 921** can only be guaranteed by **KINSHOFER** GmbH in case the ORIGINAL **KINSHOFER FIXED** and HOIST DISCS are used on the container in the specified distance dimensions!
Do not use fixed discs with locking ribs!

KINSHOFER container discharge attachments with the fast KINSHOFER mushroom system are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation.

Container discharge unit KM 920-12 for containers with **KINSHOFER** mushroom system

- Robust mechanics with self centring hydraulic interlocking.
- Precise positioning with rotator, direct hose routing.
- Independence of crane operating pressure due to the pressure relief valve.
- Protection against damage of container by automatic lift stop and an additional height control system.
- Pressure control for user controlled unlocking.
- Including integrated locking indicator (from Q4 2015).

Twin-Hook Container Discharge Unit

KM 920-31

The **KINSHOFER** container discharge unit with twin-hook for deposit containers with system Schäfer are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation. The attachment is extremely maintenance low, robust and low-built thanks to its compact construction.

The **KINSHOFER** Container discharge unit KM 920-31 for containers with twin-hook system

- Robust mechanics.
- Precise positioning with KINSHOFER rotator, short hose connection.
- Independence of crane operating pressure due to the pressure relief valve.
- Easy handling thanks to low overall height.
- Low maintenance

The pole grapple KM 930-1000 Special is a perfectly matched attachment for drilling sites. Poles can be gripped easily and positioned precisely.

The 3-Axes-Manipulator KM 931 features maximum manoeuvrability for your attachments at the loader crane's tip – and provides flexibility of the loader crane's use in any arc position.

- **3-axes-manipulator: maneuverability** by three hydraulic functions: gripping, rotating and tilting (3rd hydraulic cycle needed).
- **Endless rotation.**
- **High loads** up to 1000 kg.
- **Precise positioning** guaranteed by self-locking worm drive (KM 931-1000).
- **5-line feedthrough.**
- **KM 930-1000 Special** provides an **exchangeable jaw system**.

Technical Drawings

A hydraulically operated attachment used for positioning tubes or poles, the KM 930 is for use on loader cranes with three functions. Flange mounting on the mechanical extension of the crane.

- **Manoeuvrability** through three hydraulic functions gripping, lifting and turning (rotation and tilting) of straight round poles (three hydraulic circuits are necessary). Unlimited angle of rotation.
- **Heavy loads** of 500 kg up to 3000 kg can be handled by the **KINSHOFER** manipulators.
- **Precision operation** assured through continuous rotation, equipped with mechanically operating, hydraulic pilot controlled brake to prevent unintentional rotation.

The KM 932MB Barrier Lifter is a mechanical grapple for fast and convenient handling of concrete barriers and blocks.

- **Safe:** Carbide gripping pads ensure safe operation, even on wet or coated surfaces. An optical power indicator illustrates the range for optimum grip.
- **Efficient:** The fully integrated, mechanically operated "latch & release" system allows the unit to function independently, without assistance from a ground man.
- **Versatile:** Multi-position arms are a standard feature. This means one unit can achieve different gripping ranges by simply changing a pin position.
- **Cost-effective:** The elimination of slings and chains means more cycles can be achieved per hour.
- **Fast:** The "latch & release" system functions automatically each time the load line is slackened.

Earth Drills

3000TC / 5500TC / 7000TC

The robust earth drills for truck cranes up to 18 t/m are an economical and customized solution for earth drills e.g. for fencing, road signage, landscaping and tree planting. Well borings, screw pile installations and sound barrier installations are also no problem for the earth drills.

- Non Dislodgement Shaft (NDS) for more safety and lower down times, as this unique construction prevents the output shaft from dislodgement.
- Pre-filled with a colored gear oil. Not only is the use of a colored oil a good indicator of correct service, but it also aids identifying possible hydraulic oil leaks.
- The heavy duty fabricated hoods feature forged steel ears; these high strength ears easily transmit the high torsional loads, experienced whilst drilling, without becoming fatigued.
- Easy access oil service points.

The S4 auger is perfectly matched to the 3000TC earth drill and every task. A constant spiral configuration and a shallow pitch flight guarantee extreme efficiency and productivity. Suitable for truck cranes up to 9 t/m.

- Higher productivity by constant spiral configuration and the perfectly angled tooth holder.
- Interchangeable pilots and teeth allow for differing ground conditions.
- Easy fitting of teeth and pilots.
- Patented Shock Lock-System: incorporating a shock absorbing rubber element to protect the tungsten carbide on the tooth assembly coupled with a solid locking pin prevent tooth loss.
- High flexibility thanks to different auger extensions.
- For earth drill 3000TC.

Series of CRANAB grapples for global forestry, optimised for forwarders and truck cranes as well as chippers. Whichever series you choose, has been produced to enable you to work effectively with complete control and precision.

- **CR** – The complete program of round wood grapple. Fast, flexible and secure. All properties that are required for loading the timber with high productivity are collected in the same design.
- **CE** – Energy wood grapples for tough handling and the right feeling. The design makes energy wood handling efficient and free from disturbance. The form of the jaws makes penetration in the brushwood easier. The grapples compact and smooth design makes it suitable even for other applications like feeding chippers.
- **CI** – The single log grapple's smooth and special design makes it excellent for intensive handling. Its simple yet robust shape is ideal for industrial purposes.

Forestry Grapples

Cranab Grapples - CT

Series of CRANAB grapples for global forestry, optimised for forwarders and truck cranes as well as chippers. Whichever series you choose, has been produced to enable you to work effectively with complete control and precision.

- **CT** – Optimised series. The design work has placed great emphasis on handling and the weight of the grapples. The grapples easily penetrate the timber stacks and retract easily. Designed for continuous and more demanding work.

- **CR x** – The CR X Grapple incorporates an innovative new tapered jaw profile. The new jaw shape increases timber handling performance with the tapered profile more able to penetrate log piles, glide past obstacles and lift less debris from the forest floor. The tapered profile also offer better operator visibility of the jaw tip enabling improved working performance of the grapple and crane.

The GSK grapple saw cassettes are supplied for grapples ranging from the CR/CE250 up to the CR400, and with saw bar lengths ranging from 75–100 cm. Saw chain tensioning and saw bar return are both automatic. The chain is lubricated from a separate lubricating oil tank, and the amount of oil can be easily adjusted

- **GSK** – The Cranab grapple saw cassette GSK is a robust and flexible tool for tough and varying applications in the forest industry. The cassette can be mounted on most sizes of Cranab's grapples, and with different saw bar lengths, it cuts a wide range of timber dimensions
