

Technical Business Analyst

Starting Date: October 2021

Full-time

The Role

The role presents an opportunity to become an integral part of our product development team with plenty of room to be creative and shape new decentralized products and solutions at the crossroads between Distributed Ledger Technology and IoT. We're looking for a proven technical business analyst who has experience gathering and creating requirements for complex and novel products and is comfortable working closely with our engineers and business team in order to create new products and advance existing ones.

We are a team of hungry entrepreneurs and engineers driven by the opportunity to positively shape our collective future. We have the technology, the team and the timing to decentralize businesses, markets and even economies, creating more open, sustainable and inclusive ways of living and working.

If you identify with the above, you're not just looking for a 9-5, and are ready to take complete ownership of this position - we look forward to hearing from you.

Minimum Qualifications

- 3+ years of professional work experience in a deep tech and/or startup environment.
- Deep knowledge of product and project management and experience in carrying out requirements specifications and optimization measures in interdisciplinary teams.
- Bachelor/Master's degree in engineering, maths, physics, computer science or equivalent.
- Sound experience in the conception of business processes and their implementation.
- Excellent data analysis skills and experience traversing complex data structures.
- In-depth knowledge of enterprise software and familiarity with the field of IoT.
- Ability to understand our core product and solutions in depth and explain it to external stakeholders.

Preferred Qualifications

- Ability to understand technical papers and good knowledge of database types and structures.
- Basic programming skills in a backend programming language such as Go, Ruby, Rust, C++, C#, Java or C is a plus.
- Experienced working in an agile/scrum team.
- Experience in software development process improvement.
- Experienced in working with project management tools like Jira, Youtrack or Microsoft Project etc.
- Willing to travel to attend client meetings.
- Structured, success-oriented and accountable.
- Fluent in both German and English.
- Technical background in distributed systems / blockchain.

Responsibilities

- Gathering and creating detailed requirements for our tech team.
- Conducting in depth market research on new and existing solutions.
- Joining customer and partner meetings to gather new requirements.
- Being the executive interface between our Chief Product Officer and Technical Project Manager in order to break down newly gathered input for the product vision into detailed product development requirements.
- Functioning as a product owner in alignment with our Chief Product Officer.
- Deriving measures for product and process optimization from your data analysis.

What we offer

- The opportunity to contribute to innovative projects in a new and exciting industry that has the potential to positively shape our world.
- High growth potential.
- Warm and open corporate culture at an international company with many different nationalities.
- An environment that values freedom, autonomy, team spirit and open communication.
- Flexible working hours.
- Decentralized (remote) working possibilities.
- Office space in the heart of Berlin and Potsdam. More offices to be opened soon.

We look forward to working with you.
