include

fullstack engineer

about the role:

We are looking for a Fullstack Engineer to help execute an ambitious technology roadmap.

You will work closely with our VP of Product and Senior Engineer to implement and maintain our Node.js and React.js applications, follow agile best practices, perform and receive code reviews, maintain and improve our codebase's test coverage, and take ownership of product features from conception to completion.

location

Remote
Desirable location:
Washington, D.C.

salary*
$85,000 - $120,000
(*location & level of experience dependent)

who you are:

- You love solving hard problems with a badass team
- You thrive in environments without a lot of structure, and stay focused even as priorities shift
- You value frequent and transparent communication
- You're excited to join a small, but mighty, team where your contributions could be implemented quickly

what you'll do:

- Follow Agile best practices in cooperation with our Senior Engineer
- Maintain and improve our existing React.js and Node.js application
- Take ownership of product features from conception to completion
- Scope & build new features

include
fullstack engineer

---

experience:

- Strong competency with JavaScript

- 2+ Years working in React (bonus points for experience using Redux and its derivatives: Saga, Thunk, Form)
