

NOTABLE FEATURES

REASONS WHY CONSTELLIX IS A BETTER ALTERNATIVE TO AZURE

UPTIME

Constellix is the only provider in the industry to offer true 100% uptime regionally and worldwide since inception. Constellix owns the largest authoritative DNS network in the world. Backed by 20 PoPs worldwide and located at crucial peering points for optimal connectivity.

DNS METRICS

Constellix offers the most advanced query analytics and insight to your DNS traffic in the industry. Real-Time Analytics allows you to export system logs, detect potential attacks, identify stale or unused records, and pinpoint a CDN that may be making excess requests.

GEODNS ROUTING

Constellix offers a powerful set of tools that allow you to segment your traffic based on your users' location or network. GeoDNS empowers you to build your own CDN, load balance between multiple systems, block malicious or unwanted traffic, and optimizes routing for different networks or regions.

AI / ML ALERTING

Constellix is the only provider in the world to alert you of suspicious spikes with our Real-Time Traffic Anomaly Detection. Receive automatic notifications if you are encountering a DDoS or malicious spam attack, internal systems are configured incorrectly, or if you are experiencing server issues.

DNS FAILOVER

Our enterprise monitoring suite, Sonar, automatically moves your traffic from unavailable resources to healthy ones. DNS failover is intrinsically integrated with GeoProximity, global load balancing, traffic steering, round robin, and latency load balancing. Failover is supported for A, AAAA, ANAME, and CNAME records.

Multi CDN CAPABILITIES

Constellix utilizes real-time machine learning to dynamically route traffic to the best CDN for each user. Our unique CDN dashboard allows you to filter and visualize data using a variety of metrics. Receive instant notifications with our built in failover if any CDN goes down and get alerted when they are up and running. Double your coverage map, ensure 100% uptime even during provider outages, and view significant performance gains. The reporting uses our ITO feature and RUM to calculate the fastest performing CDN in your desired region, therefore allowing you to obtain a granular insight to the performance into your CDN (constellix.com/products/cdn-performance).

Looking for 100% Uptime? We've got you covered.

How Do We Compare?

100% global uptime over the past 12 months.

100% Uptime History

Constellix has a 100% uptime for > 5 years since service was launched.

Top tier DNS speeds

Easy wizards and import utilities

IP Anycast DNS network (DNS resolution at the edge)

24/7/365 Technical Support

Only with paid support plans

Live Chat Support

Multi-factor authentication and SSO

DNS Failover on A / AAAA / CNAME/ and ANAME records.

Limited Functionality

Support CERT, HINFO and RP record types

Hidden Frame Masked Redirections

Monitoring results

Sonar provides full reporting and diagnosis of service outages.

Limited results and limited monitoring options.

Geo DNS capabilities

Limited capabilities

Internet Traffic Optimization (decisions based on performance)

RUM Internet Traffic Optimization (decisions based on end-user speed results)

MultiCDN capabilities

MultiCloud capabilities

Full API Capabilities

GUI Interface for DNS management
