

Basement Resetters - *For metering existing services*

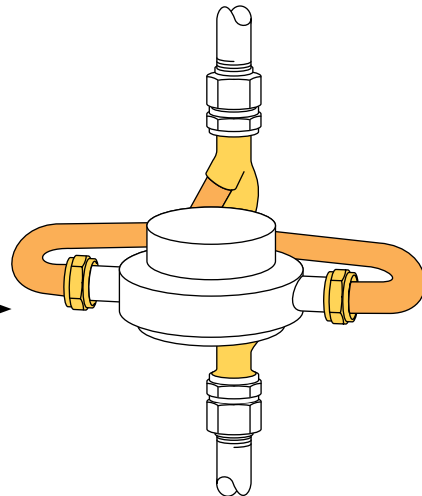

Many older services have the meter installed in an incorrect position. The dial is set in the vertical plane, causing rapid wear of the piston or disc and thus an under-registration of water usage. The Basement Resetter corrects this problem, since its inlet and outlet threads are spaced and sized the same as those of a standard meter and are attached to the existing meter couplings. The meter is then placed into the setter in the correct horizontal position. The entire installation takes only a few minutes.

After the Basement Resetter is installed, it gives you the same benefits of any other Ford Inside Setter. It holds the piping permanently in place and provides electrical bonding when the meter is removed. Meter changes are easy and trouble-free.

← Meter set in wrong position – dial in the vertical plane.
