

Agile in Action Training

Understanding agility while having fun

The theoretical fundamentals of Scrum and Agile in general can easily be acquired in any good beginner's course or certification. However, a truly agile mindset and applying the underlying values in practice are the actual key to success.

This training helps participants to better understand the purpose of agile best practices and methods. We will experience what working agile instead of planning the entire day upfront really means. Furthermore, the workshop and its intense collaboration is also a great kick-off or energizer for colleagues that are working within one self-organized team.

Basic information

- 1 day
- 6-10 participants
- 2 trainers
- German or English

Contents

- Using the "Sphero" robotic balls, participants will build a product of maximum value within one day.
- This task will be set up as an agile "project" with 3 iterations and a fictional customer that needs to be satisfied.
- Team structure and processes as well as the technical solution are completely up to the self-organized team.
- In the end, explicitly and implicitly used agile methodologies and their applicability to real products will be reflected.

Prerequisites and target group

- I want to see Agile in action to apply the resulting knowledge and experience in my everyday life.
- I want to witness how the group builds a tremendous team spirit within hours.
- Programming skills are not required. We will only work with graphical development interfaces that were originally designed for children.
