

# BlueBoard Extension

Like Keepa, but for all e-tailers

Chrome

Firefox  
(coming soon)

## Pricing and stock data, in your daily workflow

For e-commerce professionals with no time to waste, the BlueBoard extension seamlessly integrates **highly contextual insights** into their workflows.

The screenshot shows a Best Buy product page for Beats Studio3 headphones. A BlueBoard extension overlay is visible, displaying a price history chart and availability history for the product. The chart shows prices from June 18 to July 15, with data points for BestBuy.com (USD 349.99), Amazon.com (USD 349.99), and Target.com (USD 349.99). A callout box highlights a price drop to USD 13.44 on Amazon.com on July 3. The availability history shows the product was out of stock from June 27 to July 3.

**From any BlueBoard-monitored page, see:**

- Real-time price/stock
- 30-day median price
- Full pricing history
- Full availability history

What a great addition to our workflow with Blueboard! This is really helpful.

**Jasmin P., Country manager**

### Admins

Engage more users on BlueBoard. Ensure BlueBoard's data serves your whole team.

### Users

Make data-driven decisions with no extra effort. Save time by integrating BlueBoard data into your daily workflows.

**GET STARTED**

1. Install the BlueBoard extension for [Chrome](#) or [Firefox](#) (coming soon).
2. Visit any product page that BlueBoard tracks.
