

ARCURVE

Software Development

Sustainment Services

Helping You Sustain Your Software

At Arcurve, we don't just build software. We can help you sustain your legacy software by supplementing your existing team with expert skills across the entire software development spectrum, or just help you with bug fixes and enhancement requests.

Our Sustainment Services

- Sustainment advisory services
 - Sustainment planning
 - Transition planning
- Team augmentation and mentoring
- Institutional knowledge capture and retention
- Data migration
- Integration development
- Tactical enhancements
- Strategic re-platforming

No Matter Your Business Objectives, We Can Help

- Providing technical support, transition planning and decommissioning activities when running an existing software solution to “end of life” and then transitioning to something new.
- Extending the lifespan of a system through tactical enhancements, security fixes, or defect fixes. We can analyze, plan, implement, test, and deploy these for you.
- In times of organizational transition, Arcurve can step into a temporary CTO role to help you understand how your system works, document and support it.

Past Mandates

- Upgrading the source code and resurrecting the program to make enhancements for a customer who lost the ability to compile C/C++ source code.
- Sustaining a VB.Net suite of programs for a large energy firm
- Sustainment and tactical enhancements of tablet and back-end software in the midstream O&G business
- Sustain a product we built in between major upgrade cycles for a large technology firm
- Re-platforming an on-premises legacy application to cloud-based PaaS, migrate from commercial RDBMS to Open Source for a large energy company
- Enhancing mobile app and solution working to propel a start-up business forward

Thank you for your business.
