

SaaS-Based Research Management

Your Freshest Insights Available in Real-Time

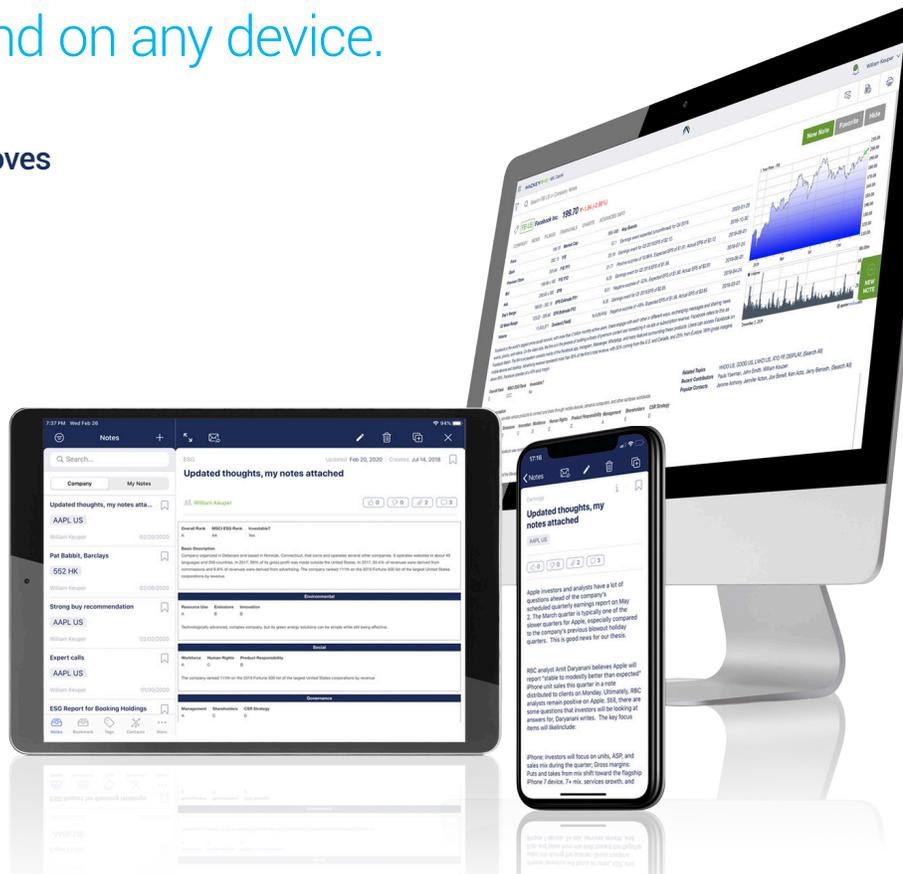

MackeyRMS is a work-from-anywhere research management platform that helps investment teams maintain a single, current version of the investment story from any location and on any device.

Clients say our SaaS-based platform improves team productivity and output, while adding structure to their investment process.

Our flexible API seamlessly integrates with individual productivity tools and enterprise-level financial applications to improve transparency, efficiency and control over your research content.

Our platform's content auto-tagging feature helps keep research organized by ticker, topic, timeline, contact, and any other keywords you choose. Advanced workflow management tools also enable your team to track ideas and activities across the entire investment process.

And moving to MackeyRMS is quick and easy. Our team can migrate your historical research content remotely and have your team up and running in a matter of days.

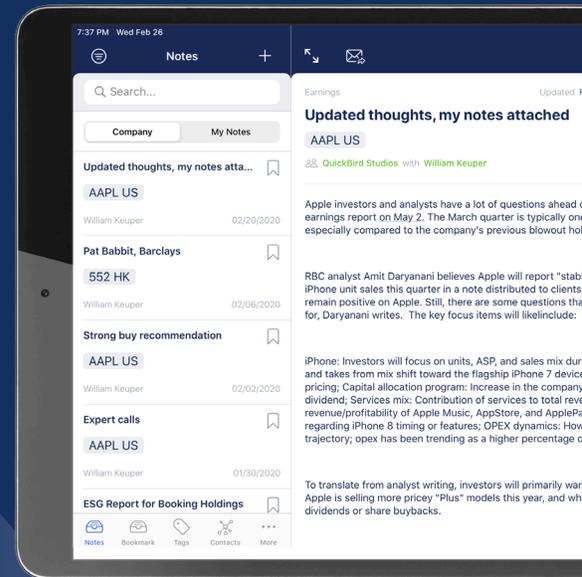

Working Through Disruption.

We're helping investment management teams make a **seamless transition from office to home** in the wake of recent, severe market disruption.

SaaS-based technology is making that switch easier. Let us help your team make the transition to maintain 100 percent capacity throughout this event.

About MackeyRMS

MackeyRMS is a provider of SaaS-delivered research management software engineered to optimize the way analysts and portfolio managers generate, share, debate and act on investment research conducted for actively managed portfolios. Relied upon as a single system of record for research supporting the investment process, Mackey is used by many of the world's leading investment managers to organize key investment workflows, engender trust from investors, and streamline regulatory and compliance oversight. Mackey is used by institutional asset managers and asset owners across the Americas, EMEA and APAC regions.
