

MOBILESM

C L A S S R O O M

Fall is coming, and school will be open. Our classrooms will be safe and ready for students. But for those not ready to return to a school building, we are using innovative ideas and technology to bring the classroom to students, wherever they are. To do this, we're excited to introduce

MOBILE
CLASSROOM

MOBILE is an innovative platform of learning that takes best practices from traditional, blended, mixed-mode, and distance learning methods to create the most optimal learning experience for each and every student. Utilizing state-of-the-art technology, **MOBILE** creates a highly personalized form of learning that brings elements of choice to maximize a student's potential. Our vision is to break down the walls of classrooms to provide a high-quality education to every student, regardless of physical location, by doing the following:

- Extending the reach of our best teachers beyond the traditional classroom;
- Bringing classroom learning to each student by combining the advantages of face-to-face learning with the necessity of virtual learning should health concerns require it;
- Accelerating learning by leveraging a developmental ("stage, not age"), mastery-based learning approach that will allow each student to reach their full potential; and
- Transforming the traditional accountability system to truly measure student growth and achievement beyond end-of-year state standardized assessments.

MOBILE will allow parents to have a choice, not only when it comes to which school to send their child to, but also how to have school/education delivered to them. In order to achieve this, we are equipping our classrooms with a **MOBILE** kit that will contain the technological tools needed to reach students in a school building or at home. The **MOBILE** kit includes:

- A smart camera that provides 360-degree video and audio coverage of the classroom;
- An additional monitor to maximize teacher desktop space;
- Full suites of office and creative software;
- A wireless headset for the teacher, which will allow him/her to move freely around the physical classroom while also interacting with students off campus;
- A webcam positioned to stream work on the whiteboard from the classroom to students off campus; and
- All connecting cords and adapters needed to make the elements of the **MOBILE** kit work together.

As a family of charter schools, we believe that the quality of education provided to a student should not be determined by their zip code. With advances in technology and online delivery methods necessitated by COVID-19, access to world-class teachers no longer needs to be limited to a physical classroom.
