BENEFITS OF RED LIGHT THERAPY

RED LIGHT THERAPY is a healing treatment which uses the red spectrum of light to boost and energize your body's natural defense systems and bring relief from various ailments. Red light is primarily absorbed by your skin, leading to increased collagen production and optimal skin health.

RED LIGHT THERAPY - Reduces Pain and Inflammation

Heat alone can reduce stiffness by 20%. Red light opens blood vessels to increase blood flow and oxygen, helping relieve pain and inflammation.

	<p>1 Increased Immunity & Reduced Side Effects of Cancer Treatments</p> <p>Research done by NASA in conjunction with the University of Alabama at Birmingham Hospital has shown that red light technology can successfully reduce symptoms experienced by cancer patients, including painful side effects caused from radiation or chemotherapy.</p>
	<p>2 Wound Healing & Tissue Repair</p> <p>Red light therapy has been shown to positively affect skin cells through regeneration of fibroblasts, keratinocytes and modulation of immune cells all found within skin tissue.</p>
	<p>3 Anti-Aging Effects for Skin & Hair Loss</p> <p>Subjects treated with red light therapy experienced significantly improved skin complexion, improved skin tone, improved texture/feeling, reduced skin roughness, reduced signs of wrinkles and fine lines, and increased collagen density as measured through ultrasonographic tests.</p>
	<p>4 Improved Joint & Musculoskeletal Health</p> <p>Red light therapy is now being used to treat arthritis symptoms thanks to its capability of stimulating collagen production and rebuilding cartilage.</p>
	<p>5 Reduced Depression & Fatigue</p> <p>Red light therapy has been shown to increase self-confidence, positivity, passion, joyfulness, laughter, social awareness, conversation skills and sensory stimulation in some individuals.</p>
