

Stryker's Smoke Free

O.R. Program

Our Smoke Free O.R. Program provides education, product recommendations and financing options that can help smooth your transition to become a surgical smoke-free facility.

1 The Neptune SafeAir Smoke Evacuation Portfolio

The Neptune 3 Waste Management System, the SafeAir Smoke Evacuation Pencils and SafeAir Compact Smoke Evacuators help protect against potential O.R. hazards, from the floor you walk on to the air you breathe. Surgical smoke plume is pervasive in the daily lives of all healthcare workers in the operating room (O.R.) practice setting. Safeguarding your O.R. by committing to a smoke-free environment is also beneficial for your patients. For a consult or trial, please contact your local account manager. If your facility is also participating in the AORN Go Clear program, your account manager can assist you with Step 4. This is the gap analysis, which identifies the required equipment to achieve a smoke-free O.R.

2 PneumoClear CO₂ Conditioning Insufflator

Removing plume from your O.R. doesn't just help you see more during surgery, it also helps remove the harmful bacteria that standard surgical masks are inadequate at filtering out. The PneumoClear insufflation platform offers an all-inclusive package dedicated to consistently clear images and improved patient recovery. Alongside its heating and humidification features, integrated smoke evacuation offers four levels of plume removal through a single lightweight and flexible tube set. Contact your local sales representative for more information.

3 Flex Financial options: Financing to pave the way

To help turn your vision of a smoke-free O.R. into a reality, we have financing options available to help you. Whether you prefer to set up a payment plan or simply pay for the use of equipment through the regular purchase of disposables, Stryker's Flex Financial team can customize an acquisition program that will meet your unique business needs.

4 Stryker's Learn Program: Continuing Medical Education

We offer the "Smoke Evacuation/Dangers of Smoke Plume" course through Stryker's Learn Program. This continuing education activity will provide a review of the dangers of exposure to surgical smoke plume as well as effective strategies to minimize this exposure in the O.R. The contents of, and hazards associated with, surgical smoke plume will be reviewed. Current regulations, guidelines, and recommended practices related to evacuation of surgical smoke will be outlined, focusing on risk reduction strategies. The various types of smoke evacuation systems available today will be described, including the key criteria in the evaluation and selection of a smoke evacuation system. Finally, the clinical implications of failure to comply with surgical smoke evacuation guidelines will be discussed, followed by a list of tools to facilitate compliance. Step 7 of the AORN Go Clear program requires participating facilities to complete surgical smoke education. Contact your local account manager to plan a Continuing Medical Education event to kick off the Go Clear program.

Surgical Technologies

This document is intended solely for the use of healthcare professionals. A surgeon must always rely on his or her own professional clinical judgment when deciding whether to use a particular product when treating a particular patient. We do not dispense medical advice and recommend that surgeons be trained in the use of any particular product before using it in surgery.

The information presented is intended to demonstrate Stryker's products. A surgeon must always refer to the package insert, product label and/or instructions for use, including the instructions for cleaning and sterilization (if applicable), before using any of Stryker's products. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your representative if you have questions about the availability of Stryker's products in your area.

Stryker or its affiliated entities own, use, or have applied for the following trademarks or service marks: Neptune, PneumoClear, SafeAir and Stryker. All other trademarks are trademarks of their respective owners or holders.

The absence of a product, feature, or service name, or logo from this list does not constitute a waiver of Stryker's trademark or other intellectual property rights concerning that name or logo.
