Automated invoice reading

KARLOVARSKÉ MINERÁLNÍ VODY, a.s.

Automated invoice reading

"Are you looking for a way to streamline the different ways of recording and billing invoices within different entities of your company?"

THE CHALLENGE

Our client struggled to process a large number of invoices in different SAP instances according to individual companies and the type of invoice acquired.

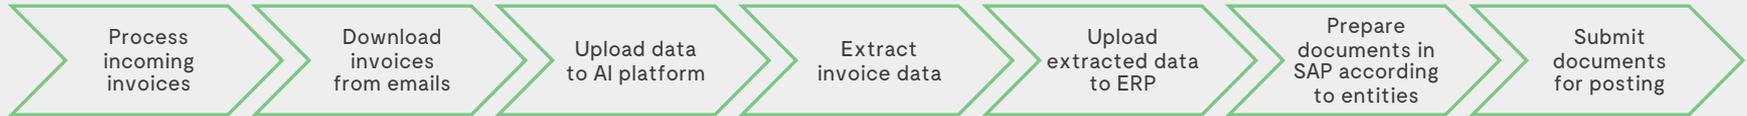

The client required uniform means of processing, a clearly described, definable and faster process, and was looking for a way to save FTEs.

THE SOLUTION

We successfully automated the process of obtaining received invoices. Our digital worker reads invoices from emails and imports them into the folders of individual company entities within the artificial intelligence platform. Each folder was set up according to the specific kind of invoice. In each instance in SAP, steps specific to the given entity were established. A check for the interconnection of invoices with individual orders is also ensured. The process ends with the acquisition of documents and their handover to the accounting office for posting.

Automated invoice reading

Automated invoice creation

CZECHOSLOVAK GROUP, a.s.

Automated invoice creation

"Are you facing a shortage of skilled workers and their substitutability? Would you like to increase the added value of your accountants? "

THE CHALLENGE

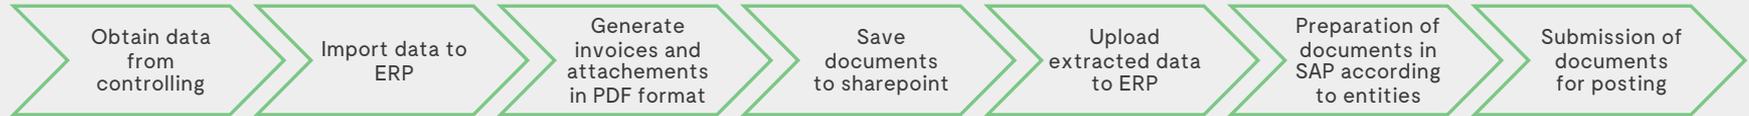

Our client addressed the need to manually process a large number of invoices in a limited amount of time. In addition, the existing process depended only on one employee who had the required qualifications. The problem therefore arose from their irreplaceability in the event of the absence of this worker.

THE SOLUTION

We automated the process to replace the manual work of the account entirely. Now, the controlling department creates the invoicing documents and saves them on Sharepoint. Our robot downloads the documents and creates an invoice according to each line item. The invoice then is sent to the according customer automatically once a month without a single human touch.

Automated invoice creation

Process map of the automated process

What benefits did the process automation bring?

Reduced invoice creation time

100% data entry accuracy

Substitutability of qualified staff

Automated e-mail processing

VEOLIA Czech Republic, a.s.

Automatic e-mail processing

"Do you want to process incoming e-mails quickly and efficiently to have more time for value-added tasks?"

THE CHALLENGE

Our client receives e-mails with encrypted attachments every day. Decrypting these emails was time consuming and the time spend on decrypting emails could have been spend more efficiently in favor of tasks requiring the personal participation of employees.

The taks was to automatically process these e-mails and save them on the server.

THE SOLUTION

We have developed an automated process for decrypting e-mail attachments. However our automated e-mail processing robot covers much more than just the decryption of attachements:

- Read and sort e-mails
- Decrypt, store and import attachments
- Forward e-mails
- Reply to e-mails

Automatic e-mail processing

Process map of the automated process

What benefits did the process automation bring?

Decrypt
2 – 6 documents
in 25 – 50 seconds

Free
employee capacity

Faster response
and
e-mail processing

Comprehensive automation of the accounting agenda

M.L. Moran, a.s.

Comprehensive automation of the accounting agenda

"Would you like to relieve your accountants of the routine operations and the clutter of documents associated with them? Do you want give them time to reflect on their accounting results and provide you with relevant insights?"

THE CHALLENGE

Our client was lacking qualified staff capacity in their accounting department. The accountants were also burdened by routine processes and thus could not ensure the availability of their services to the required extent.

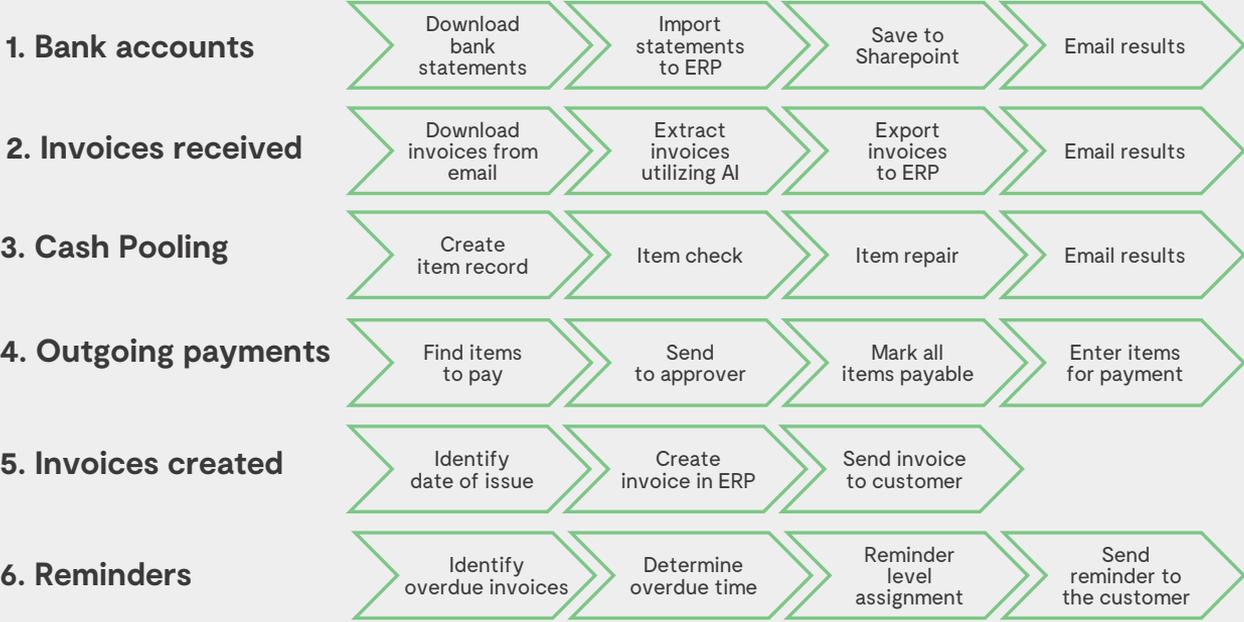

THE SOLUTION

The automation of the overall accounting agenda covered 6 main accounting processes:

- Automatic upload of bank statements to the accounting system
- Automatic processing of incoming invoices
- Cash pooling
- Automatic payment of approved invoices
- Automated issuing and sending of regular invoices
- Evidence of overdue invoices and automated creation of reminders

Comprehensive automation of the accounting agenda

Comprehensive automation of the accounting agenda

What benefits did the process automation bring?

Freed qualified
worker capacity

Process availability
anytime, anywhere

Gain time
to solve more
complex tasks

Cost savings
for job creation

Automated creation of confirmation letters

BDO Czech Republic, a.s.

Automated creation of confirmation letters

"Are you looking for a way to quickly navigate a large amount of internal data and verify its relevance?"

THE CHALLENGE

One of our client's processes is to figure out the status of receivables and payables of business partners to which our client provides services. The status of receivables and payables is derived from a large amount of internal data. In addition, the derived status has to be verified and confirmed with the client.

THE SOLUTION

Our robot verifies the status of receivables and payables of companies by browsing their accounting documents available in the internal database and creates an email with all relevant information. The robot then sends this email to our client's business partners, who confirm whether these receivables/payables have been recorded with the given customer.

Automated creation of confirmation letters

Automated contract creation

ALD Automotive, s.r.o.

Automated contract creation

"Do your employees spend a lot of time collecting data to prepare contracts and checking the accuracy of the information entered?"

THE CHALLENGE

Our client faced a shortage of staff who would process a growing number of contracts on time. Thus, there were delays and postponements of subsequent processes and smooth operations could not be ensured.

THE SOLUTION

Due to the routine nature of the process and the entry of clearly structured data stored in two different databases, our robot completely automated the contract creation process.

Contract creation

Process map of the automated process

What benefits did the process automation bring?

Faster
contract creation

Data accuracy

Ensure continuity
of processes

Automated tax return filing

Czech Property Investments, a.s.

Automated tax return filing

"Are you overwhelmed by the time-consuming administration associated with filing tax returns and related documents?"

THE CHALLENGE

Our client's company, which is composed of 270 entities, struggled with filing an average of 650 regular tax returns, audit and summary reports every month. We found that the time required for this process was more than 35 hours every month.

THE SOLUTION

We programmed a robot to send tax returns, control reports and summary reports to financial institutions in the form of data messages on a daily basis utilizing our client's internal application.

Automated tax return filing

Process map of the automated process

What benefits did the process automation bring?

Reduced
document filing time

Eliminated
data entry errors

Saved 2 FTEs

Ensured
process substitutability

RPA centre of excellence

VEOLIA CZECH REPUBLIC, a.s.

RPA centre of excellence

"Do you want to streamline the operation of your business from the inside, but do not know how to identify processes suitable for automation?"

THE CHALLENGE

Determining and defining processes suitable for automation, standardization and optimization can be very difficult in large companies. Many processes thus remain obsolete and inefficient for longer than needed. External analysis is always an option, but embracing an internal point of view of the business process system is beneficial.

Our client also wanted to create a more attractive environment for the younger generation of employees to attract and retain new talent.

THE SOLUTION

The transformation of the company from within was accelerated by the creation of an RPA centre of excellence (CoE). An RPA CoE is composed of an internal team of employees trained to work with a robotic platform on selected processes.

CoEs improve the internal view of possible optimization of business processes, as well as they promote and enable robotic process automation from within.

RPA center of excellence

The course of development of a CoE

Benefits of an internal center of excellence

Create a framework for continuous change and performance improvement

Implement process optimizations from the inside

Increase the added value of employees
