

Mission Statement

At South Valley Vascular, our mission is to provide the highest quality vascular care and 5-star surgical care to the communities of the Southern San Joaquin Valley (Tulare, Kings, and Fresno Counties).

What we do:

What is vascular disease? What does a vascular surgeon treat? Simply stated, a vascular surgeon treats diseases of the arteries and veins, with the exception of the brain (neurosurgeon) or the heart (cardiologist, cardiac surgeon). What conditions does a vascular surgeon treat?

- Varicose Veins
- Peripheral Artery Disease (PAD)
- Carotid Artery Disease
- Abdominal Aortic Aneurysms (AAA)
- Dialysis Access Care
- Angiogram
- Ultrasound

Who we are:

Dr. Matthew Campbell

Strongly believes that in caring for the patient, the goal is to provide the best outcomes, and to use minimally invasive techniques and procedures whenever possible.

Dr. Omar Araim

Is an expert in both minimally invasive and open vascular surgery.

Dr. LaMar Mack

An expert in vascular surgery, who strongly believes in minimally invasive treatment of vascular disease, whenever appropriate.

Dr. Abdulrahman Hamdi

Has extensive training in all aspects of vascular surgery care, including the most cutting-edge techniques and technologies.

Dr. Sid Agrawal

Dr. Sid Agrawal is a Vascular Specialist with expertise in dialysis access intervention and treatment of vein and arterial disorders.

Dr. David Nye

Provides traditional open surgery and minimally invasive techniques for managing a wide range of vascular conditions.

Diana Caudillo, FNP-C

Cathy Eckert-Juarez, FNP-C

Tim Wright, FNP-C

Our Certified Family Nurse Practitioner's provide minimally invasive treatment of varicose veins including RFA Vein Ablation, VenaSeal, and Injection Sclerotherapy.

Peripheral Arterial Disease (PAD)

This is blockage that occurs when arteries in the legs become clogged with fatty deposits called plaque. If left untreated, PAD may lead to poor quality of life, disability, or even amputation.

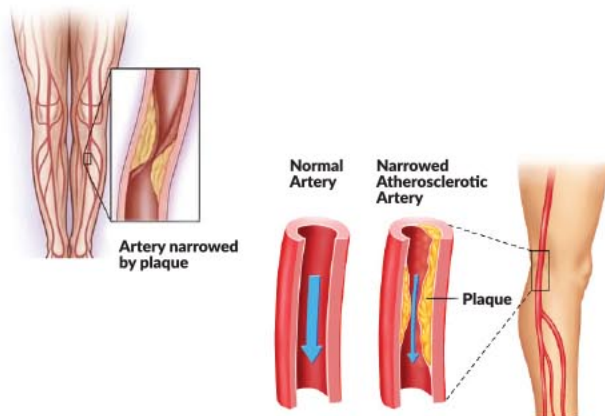

Symptoms:

- Cramps
- Tiredness
- Pain in your legs, thighs or buttocks that occur when you walk but goes away when you rest.
- Foot or toe pain at rest that may disturb your sleep. Also skin wounds or ulcers on your feet that 'are' slow to heal.

Treatments:

- Angioplasty
- Bypass

Peripheral Arterial Disease in the lower extremities is also linked to coronary artery disease.

Varicose Veins/ Spider Veins

Varicose veins are often misunderstood as simply a cosmetic issue, but when these bulging veins are left untreated, they can progress into a more serious condition of chronic venous insufficiency (CVI) and leg ulcer.

Symptoms:

- Leg or ankle swelling
- Ulcers
- Heaviness and fatigue
- Pain, aching, or cramping
- Burning or itching of the skin
- Restless legs
- Skin Changes

Treatments:

- Saphenous vein ablation
- Injection sclerotherapy
- VenaSeal

Varicose Veins

Healthy Veins

Carotid Artery Disease

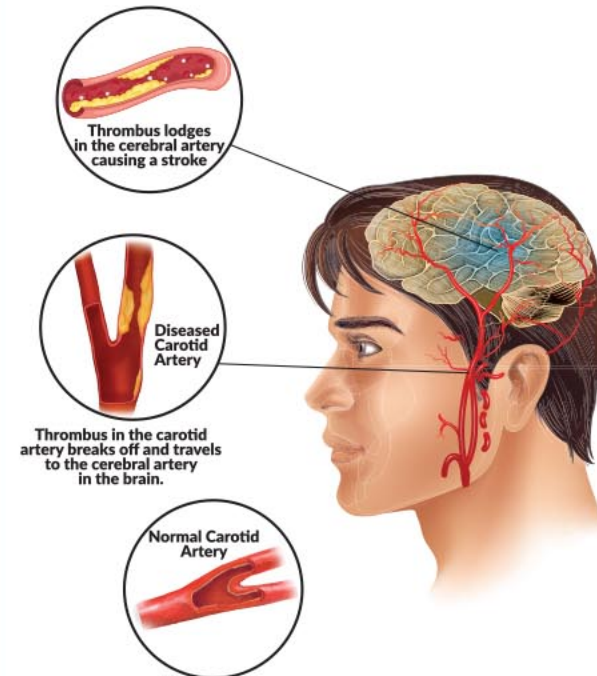

Blockage in the arteries of the neck that may lead to a stroke. This is known as the silent killer, possibly if not diagnosed early.

Possible Symptoms:

- Sudden numbness in the face or limbs (often on only one side of the body)
- Trouble speaking
- Trouble seeing
- Dizziness or severe headaches

Treatments:

- Carotid endarterectomy
- Carotid Stenting

Abdominal Aortic Aneurysm

Abdominal aortic aneurysm (AAA) Surgical and endovascular treatment of the aneurysm to prevent continued growth and rupture.

Symptoms:

- Most patients are asymptomatic
- History of aneurysm
- Family history
- Severe abdominal pain

Treatments:

- Endovascular aneurysm repair
- Open aortic aneurysm repair

Normal Abdominal Aorta

Abdominal Aortic Aneurysm
