Syserco's Proposition 39 Support Services:

OVERVIEW

Syserco's Energy Solutions team is focused and committed to helping facility owners & managers address their critical facility infrastructure needs in an effort to provide a more energy efficient, reliable and sustainable facility operation.

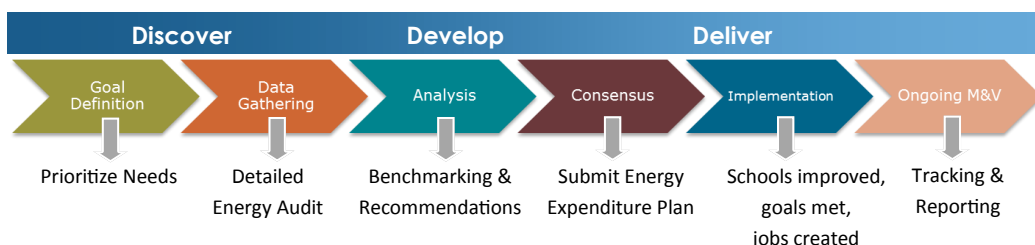

As a turnkey provider of Energy Services and Solutions, our dedicated team of energy professionals provides detailed facility auditing, energy analysis & modeling, as well as innovative strategies & designs to improve operations while reducing utility costs.

We operate as a single point of accountability throughout the discovery, development and implementation of building system upgrades & improvements. We are fully transparent in our approach and pricing and accept risk by guaranteeing project construction costs and system performance.

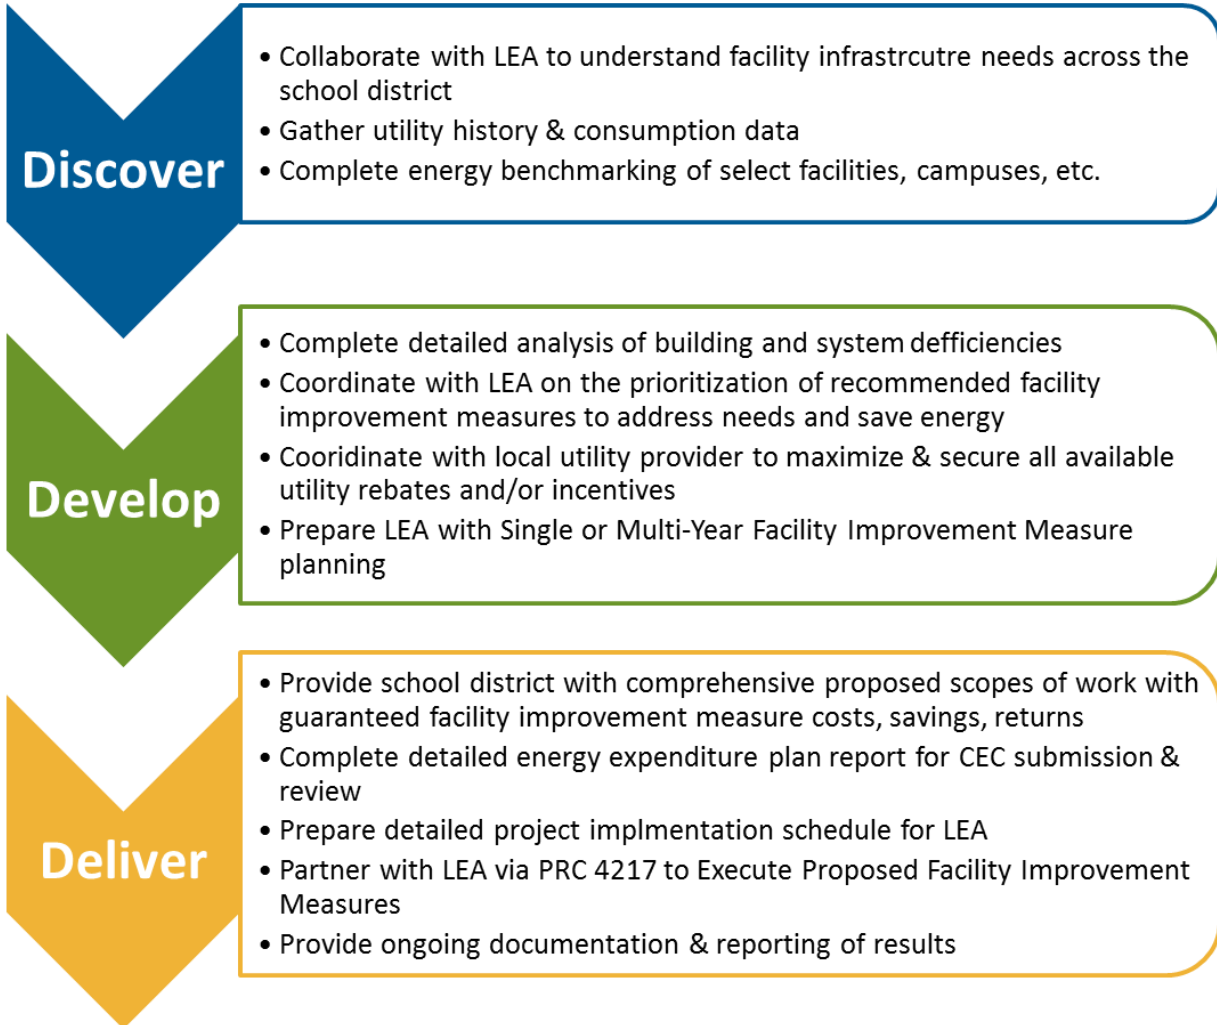

PROPOSITION 39 PROGRAM SERVICES

Syserco's Energy Solutions team offers the following professional services:

- Gather all pertinent utility history, identify system deficiencies and prioritize energy savings opportunities that help address facility infrastructure needs while maximizing utility savings.
- Coordinate with PG&E utility incentive program administrators to leverage all available utility incentives & rebates.
- Provide detailed scopes of work with guaranteed turnkey project design and implementation costs.
- Complete a quality Energy Expenditure plan report that delivers the required facility & project details to ensure the recommended facility improvements measures exceed the required cost-effectiveness criteria and SIR ratios.

Taking responsibility to help owners navigate Prop 39 regulations and requirements ...

ABOUT SYSERCO

An industry leader in developing and delivering energy saving solutions, our team provides turnkey project design and delivery services that address infrastructure needs, and dramatically improves energy efficiency and the physical environment. Whether you are building new facilities or retrofitting existing ones, our solutions and services improve system performance, lower operating costs and deliver savings for years to come.
