# SIMPLECAP

THE BEST NEEDLE SYSTEM. EVER.

## OSHA States:

Engineering (and work practice) controls must be instituted as the primary means of eliminating or minimizing employee occupational exposure.

- The CDC estimates 62% - 88% of all sharps injuries can be prevented by using safer devices
- As many as 1/3 of all sharps injuries occur during disposal of the device

- A self-contained needle system that meets OSHA's requirement for an engineering control and safer medical devices
- End-to-end safety significantly reduces the risk of needlestick injuries
- Reduces costs associated with post exposure medical follow-up
- Improves compliance to sharps safety and safe injection practices
