

As much as we may have a soft spot for the simplicity of spreadsheets, we can all admit that Excel has limitations. Briq's construction-specific corporate performance management platform can get you out of Excel Hell.

1 No more double data entry

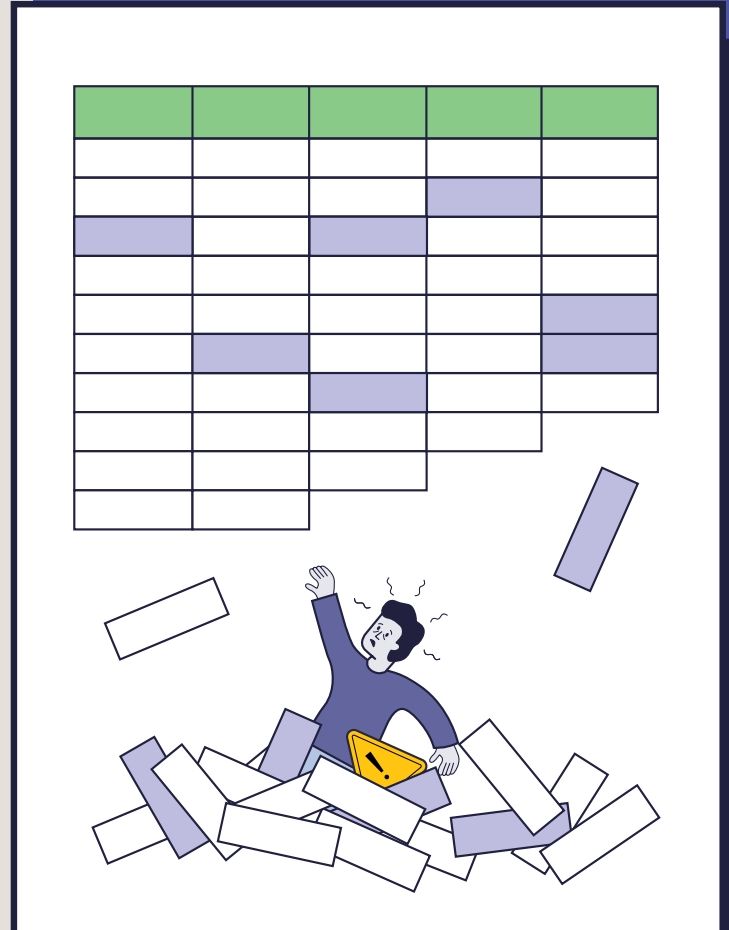

Briq workbooks allow you to focus on high-value tasks by eliminating redundant and error-prone manual financial data entry

2 One central place

Briq stores all of your financial data securely and pulls it in from your systems automatically, allowing you to populate your reports and forecasts in real time

3 Collaborative capabilities

Briq enables anyone on your team to have access to the financial data they need, whether they're in the field, in the office, or working from home

"A lot of great people in the finance department are doing double data entry. Automate away the waste. Something that we know gives you a higher ROI is being paperless, but what about being Excel-less? Excel is insecure, Excel is almost impossible to historically report data from. It bleeds intelligence."

— **Bassem Hamdy, CEO, Briq**
