

Fluid Lock Trays

The fluid lock tray has been developed to eliminate the need for soaker pads in chilled and ambient food trays. The 'dimples' in the bottom of the tray hold the fluid even when the pack is tilted or turned upside down.

By eliminating the need for a soaker pad in the bottom of the tray, the fluid lock tray contributes

towards protecting the environment by reducing non-recyclable waste.

As a result, consumers don't have to worry about meat fluids spoiling their shopping, or having to remove and dispose of soaker pads prior to recycling their tray.

Standard sizes:

- 200 x 125 x 35mm
- 200 x 175 x 35mm
- 285 x 140 x 35mm
- 274 x 220 x 35mm

(Bespoke sizes available)

Range of materials:

- Virgin polymer with recycled plastic content
- Fully recyclable
- Compostable starch or bamboo based materials
