Leading the World in Retread Technology

TYRE PLAN EUROPE

The activities of two companies within the Kargo Group, Banden Plan Europa in The Netherlands and Tyre Plan Europe in Belgium include the retreading

of truck-casings. It goes without saying that the most advanced inspection methods are applied during production.

INCREASE THE QUALITY OF YOUR RETREADED TYRES

Compared to standard spliced strip retreading, the RINGTREAD System requires less material and less time, representing a real advantage from the beginning.

You deliver a higher quality product with lower costs, smaller facilities, greater organization, and less waste of resources.

RINGTREAD, A GREEN SOLUTION

We are constantly searching for innovations to help further reduce the environmental impact of our group's operations. RINGTREAD is an example of our commitment.

What is more environmentally-friendly than recovering and giving new life to an industrially manufactured product? and what is more environmentally-friendly than consuming less raw materials? Our ring system is all of this, and much more. It's been designed to set off

a virtuous cycle: less rolling resistance means less consumption of rubber and fuel savings, as well as less wear on the essential parts of an automobile. Everything lasts longer and works more efficiently.

The compounds used are oil-free, while processing is faster, meaning less consumption of both materials and energy. Regenerating is environmentally friendly, and even more so with RINGTREAD.

RINGTREAD SYSTEM, EXCELLENCE IN RETREADING.

Thanks to the **RINGTREAD** technology you will produce the best retread ever. Better in terms of performance and better for your business. Made without joints in radial steel molds, the **RINGTREAD** tyre uses compounds that do not contain oils and have a high content of natural rubber. Thus, it offers greater mileage than other systems, better grip than

any other retread, and significant fuel savings. The **RINGTREAD** complete cold retreading system allows the retreader to obtain an excellent product optimizing time and costs, offering a quality tyre and a range of compounds and treads able to meet every need.

RINGTREAD is the only retreading system that uses joint-free precured rings that adhere to the casing without tension or deformation of the tread pattern, ensuring the maximum performance at all times: excellent traction on demanding surfaces, low rolling resistance and consequently fuel savings, and high mileage, all thanks to the product's greater precision and directional stability, in particular the siping and blocks.

BLACKLINE, the evolution of the standard range, is the result of Marangoni's significant investments in the most modern mixing and moulding technology. In addition to the intrinsic benefits and performance of all RINGTREAD rings, this product range has been developed with new compounds, especially selected and combined to guarantee performance that meets the highest market expectations concerning fuel consumption, life, grip in the dry and the wet and sturdiness in the most demanding on-off applications. The Blackline range is available only to selected customers.

**BLACKLINE BUS100**

**Urban bus with
high mileage and
good grip**

Sizes	Depth mm
275/70R22.5	20,0
295/80R22.5	20,0
