

Virtual Cabinet Release Notes

Product: Virtual Cabinet

Build: 4.5

Release Items: 10

Fixes: 4

Enhancements: 6

© GetBusy Ltd 2020

This version of Virtual Cabinet uses **Microsoft Framework .Net 4.6**. **This must be installed prior to the upgrade** in order for Virtual Cabinet to work. For more information on preparing for this upgrade please see our website: <https://www.virtualcabinet.com/support/preparing-for-virtual-cabinet-4-0>

Best endeavours have been made to ensure this release is free of bugs and other defects. Testing and Quality Assurance processes have deemed the release as fit for purpose. However, not all environments and scenarios can be simulated. Any bugs or defects identified with this build should be reported via the [Support Website](#).

Area	Type	Id	Build	Details
General	New	VC-6324	4.5	Back and Forward multiple searches When searching you can now jump back to a search you performed earlier. See a list of the last 10 searches you performed and go back to any one of these.
	New	VC-6696	4.5	Copy Link format now more readable The Copy Link feature will now show the description of the document and the underlying link, making it easier to read. The Copy Link functionality now formats the data into Markdown format, a common formatting syntax for programs so that you can differentiate the description of a link and the link itself. Used by programs such as GetBusy.
	Bug	VC-1952	4.5	Task column settings not being remembered Changes to how the list of Tasks were displayed in the Intry were not being saved if there were no documents in the Intry.
	Bug	VC-6832	4.5	Extract fails when document path >256 characters When extracting multiple documents, the process could fail if one of the documents was being extracted to a file path that was >256 characters. VC now truncates the document name where possible to get it to fit. If this is not possible then the system will handle the errors, tell you which document has failed, and allow you to continue extracting the rest of the documents.

Virtual Cabinet Release Notes

	Bug	VC-7408	4.5.1.353	<p>Send shortcut from secure Intray</p> <p>When sending a document from your Intray to an Intray you do not have access to, you could not create a shortcut for the document at the same time.</p>
Addin	Bug	VC-6899	4.5	<p>Excel Addin disabling on touchscreen devices</p> <p>When using the VC Addin in Excel on touchscreen devices through certain remote desktop solutions the addin was being disabled by Microsoft. This was caused by a bug in Excel. The solution is to style our Addin windows using Winforms rather than WPF. No change to the functionality provided by the Addin.</p>
	Bug	VC-4406	4.5	<p>Editing documents in OneDrive folders</p> <p>Some users were having issues editing Office documents with the VC Addin whilst they have synchronised their Documents folder with Microsoft OneDrive. You can now change where your edited documents are stored to non-OneDrive synced folders.</p>
Integration	New	VC-6785	4.5	<p>Send to GetBusy from Intray & Tasks</p> <p>You can now send documents to GetBusy from other parts of VC, including the Intray and Tasks.</p>
	New	VC-6699	4.5	<p>Send documents to GetBusy as links</p> <p>Instead of sharing a copy of the document in GetBusy, share a link to the document in VC. Your local teammates will then be able to open that document with Virtual Cabinet. Keeps audit history, version control, and security within VC.</p>
	New	VC-6929	4.5	<p>GetBusy install location changed</p> <p>The VC integration now handles the new location that the GetBusy app is installed to.</p>
Server	New	VC-6747	4.5	<p>Capture Service / Exchange Online authentication</p> <p>The Capture Service can now use Microsoft's new Modern Authentication mechanism to authenticate with Office 365 Exchange Online. This utilises TLS 1.2 to encrypt communication and is more secure than the previous methods.</p> <p>An administrator will need to log in with this new authentication mechanism if required, using the Admin tab of VC.</p>
