Patient Accounting

Softek's custom-built Patient Accounting software gives you instant visibility into the status of your Accounts Receivable to monitor your billing office performance, encounters, claims denials and bill status.

Softek is your Partner in Cerner® Patient Accounting

We really couldn't afford to lose revenue after our transition to the new Cerner® EMR and patient accounting system. We went looking for experts in the Cerner® revenue cycle system and found Softek. One consultant came for a week to assess our revenue cycle and show us our opportunities. The consultant was definitely an expert. I know the term partner is probably overused, **but Softek is really a partner.**

Softek's Patient Accounting Suite

Biller Productivity

Allows you to see an individual biller's current activity, work items, queue summary and reassigned work items.

Encounter Holds

Provides comprehensive view of encounters in a hold status.

Claims Denial

Provides denials data to identify trends by health plan, denial reason or provider.

General Ledger

Make accurate forecasts, address accounting problems and improve overall financial management.

Discharged Not Final Billed (DNFB)

Gives you instant visibility into balances that have not been billed, including the hold status and age of the bills.

Aged Trial Balance (ATB)

Presents tables and graphs of the daily ATB data from your Cerner Revenue Cycle tables and lets you drill into the raw details of each bill.

Payor Report Card

Helps determine how quickly and how much is paid on claims and provides access to claims data to manage health plan contracts.
