

# Spot AI: The modern AI Camera System

Transform your organization with the most user-friendly and powerful AI Camera System on the market — all without needing to rip and replace your system.

## What makes Spot AI different?

### Power of the Edge

- Auto-connect to any IP camera. Use existing cameras or get Spot AI cameras for free.
- 24/7 continuous, local recording
- Powerful AI on high-resolution video

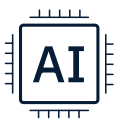

### Convenience of the Cloud

- Securely transmit and store video in the cloud
- Infinite cloud backup for saved clips
- Automatic software updates and high feature velocity

### On one dashboard, from anywhere

- Modern and intuitive user interface
- Robust Role Based Access Control with AD + SAML tie-ins
- Full video delivery and network observability

## Benefits

### AI-assisted workflows

Advanced, coachable AI assistant to streamline every workflow.

### Open platform

Works with any camera via RTSP stream, any network and any user. No need to rip and replace.

### Scalability of the Cloud

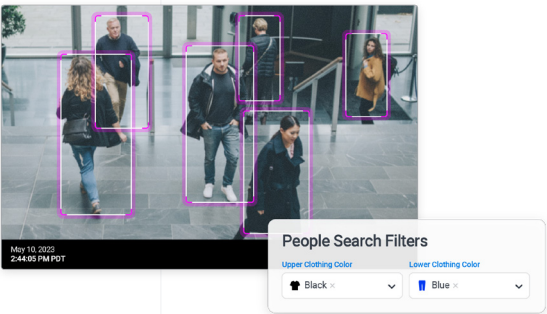

Scales with cameras, locations, users, and AI, with automated software updates.

### Secure architecture

Built-in firewall, SOC 2 Type 2 Compliant, and Zero Trust security — by design.

# Key features and capabilities

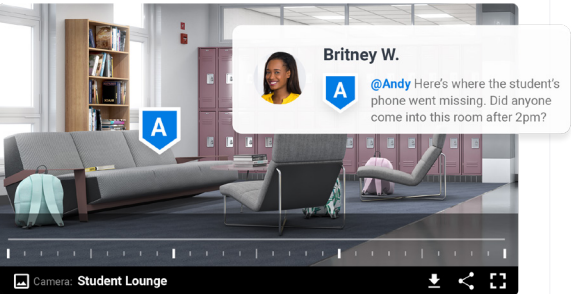

## Accelerated search

Save time with AI-enabled search through People and Vehicle Attributes, People Search with Faces, and License Plate Search.

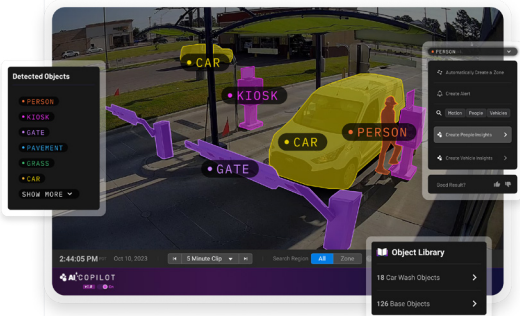

## Automate security and operations

Be both reactive *and* proactive with analytics, reporting, and alerts using our intelligence dashboards and real-time alert capabilities

## Easy collaboration tools

Share and collaborate on footage using our robust case management feature to resolve incidents quickly.

## AI assistant

Accelerate and streamline every workflow with AI Copilot: your AI assistant for cameras that works for you and learns from you.
