

Launch of new Technologies help Hockey Clubs and Training Camps

Working with Paul Vincent Hockey and PedBasis MSD

Toronto— 2020-06-26 — Today is the beginning of a new phase of training and improving hockey players of all ages. Working with Paul Vincent Hockey in Massachusetts, USA, and PedBasis MSD in Ontario, Canada, MLP Information Technologies (MLP IT) has developed an all-in-one solution that solves issues ranging from communications to player health, injury prevention and recovery.

Technology is changing constantly and the sport of hockey must catch up and embrace it. Many in the sport are of the mindset, “This is the way we have always done things so let’s keep doing it”. Time has come to bring hockey training and performance into 2020!

Positive Player Results

PedBasis MSD, lead by Michele Peters, has developed a custom skate device that maximizes the performance of any skater. Using a custom process, she can assess the skater, use 3D laser technology to capture a model of the feet, 3D image is then engineered and designed to address the specific needs of the individual, and fit the skater to ensure the best results.

“We capture a 4D image of the body which allows us to see the alignment of the spine, muscle imbalance, rotational issues, and leg length difference”. Peters says, “In our clinical practice, we have pressure mapped clients’ standing position and limited sequential forward movement, similar to the process draft picks use for vertical jumps at the NHL combine as well as for concussion protocol to assess balance. Moving forward to Spring 2020, we are in trials working with prototype Insole pressure mapping system, by XSENSOR (global leader in sensor technology), providing us real-time biomechanical feedback. We find this inspirational on many levels of our clinical process and we are grateful to be working with technology that complements our abilities and mind set of providing evidence based results!”

PedBasis MSD is now working with Paul Vincent Hockey to bring this technology to the players in his training camps. Paul is dedicated to help maximize the performance of players, as well as the players health, and this technology helps him accomplish this.

Central Hub of Communication

Communication is key on the ice, and this is also true for club organizations. Working with Paul Vincent and his years of experience in training some of the world's best hockey players, MLP IT has developed and is launching MobilePro | Club.

MobilePro | Club is a cloud-based application that organizes and keeps track of your players, coaches, consultants, medical professionals, parents, agents, and more. It provides real-time chat, video conferencing, custom drill sharing, and file sharing, including photos, videos, and documents shared by not only the coaches but players as well. All your communications go through this one hub which means no more searching through emails for notes. No more filtering through texts on your phone. No more searching for files on different devices.

All notes, files, and player information are available on any device you have on you, including your phone, tablet, laptop, or desktop computer. You will always have your information at your fingertips when you need it.

Built upon Enterprise-grade security, all data is sent across an encrypted link between our servers and your device and is stored in the Microsoft Cloud meaning your information is safe.
