USING THE INDICATOR	-	P6
LTF (LOW TIMEFRAME)	-	P7
HTF (HIGH TIMEFRAME)	-	P10
SETTINGS	-	P12

BASIC SETUP

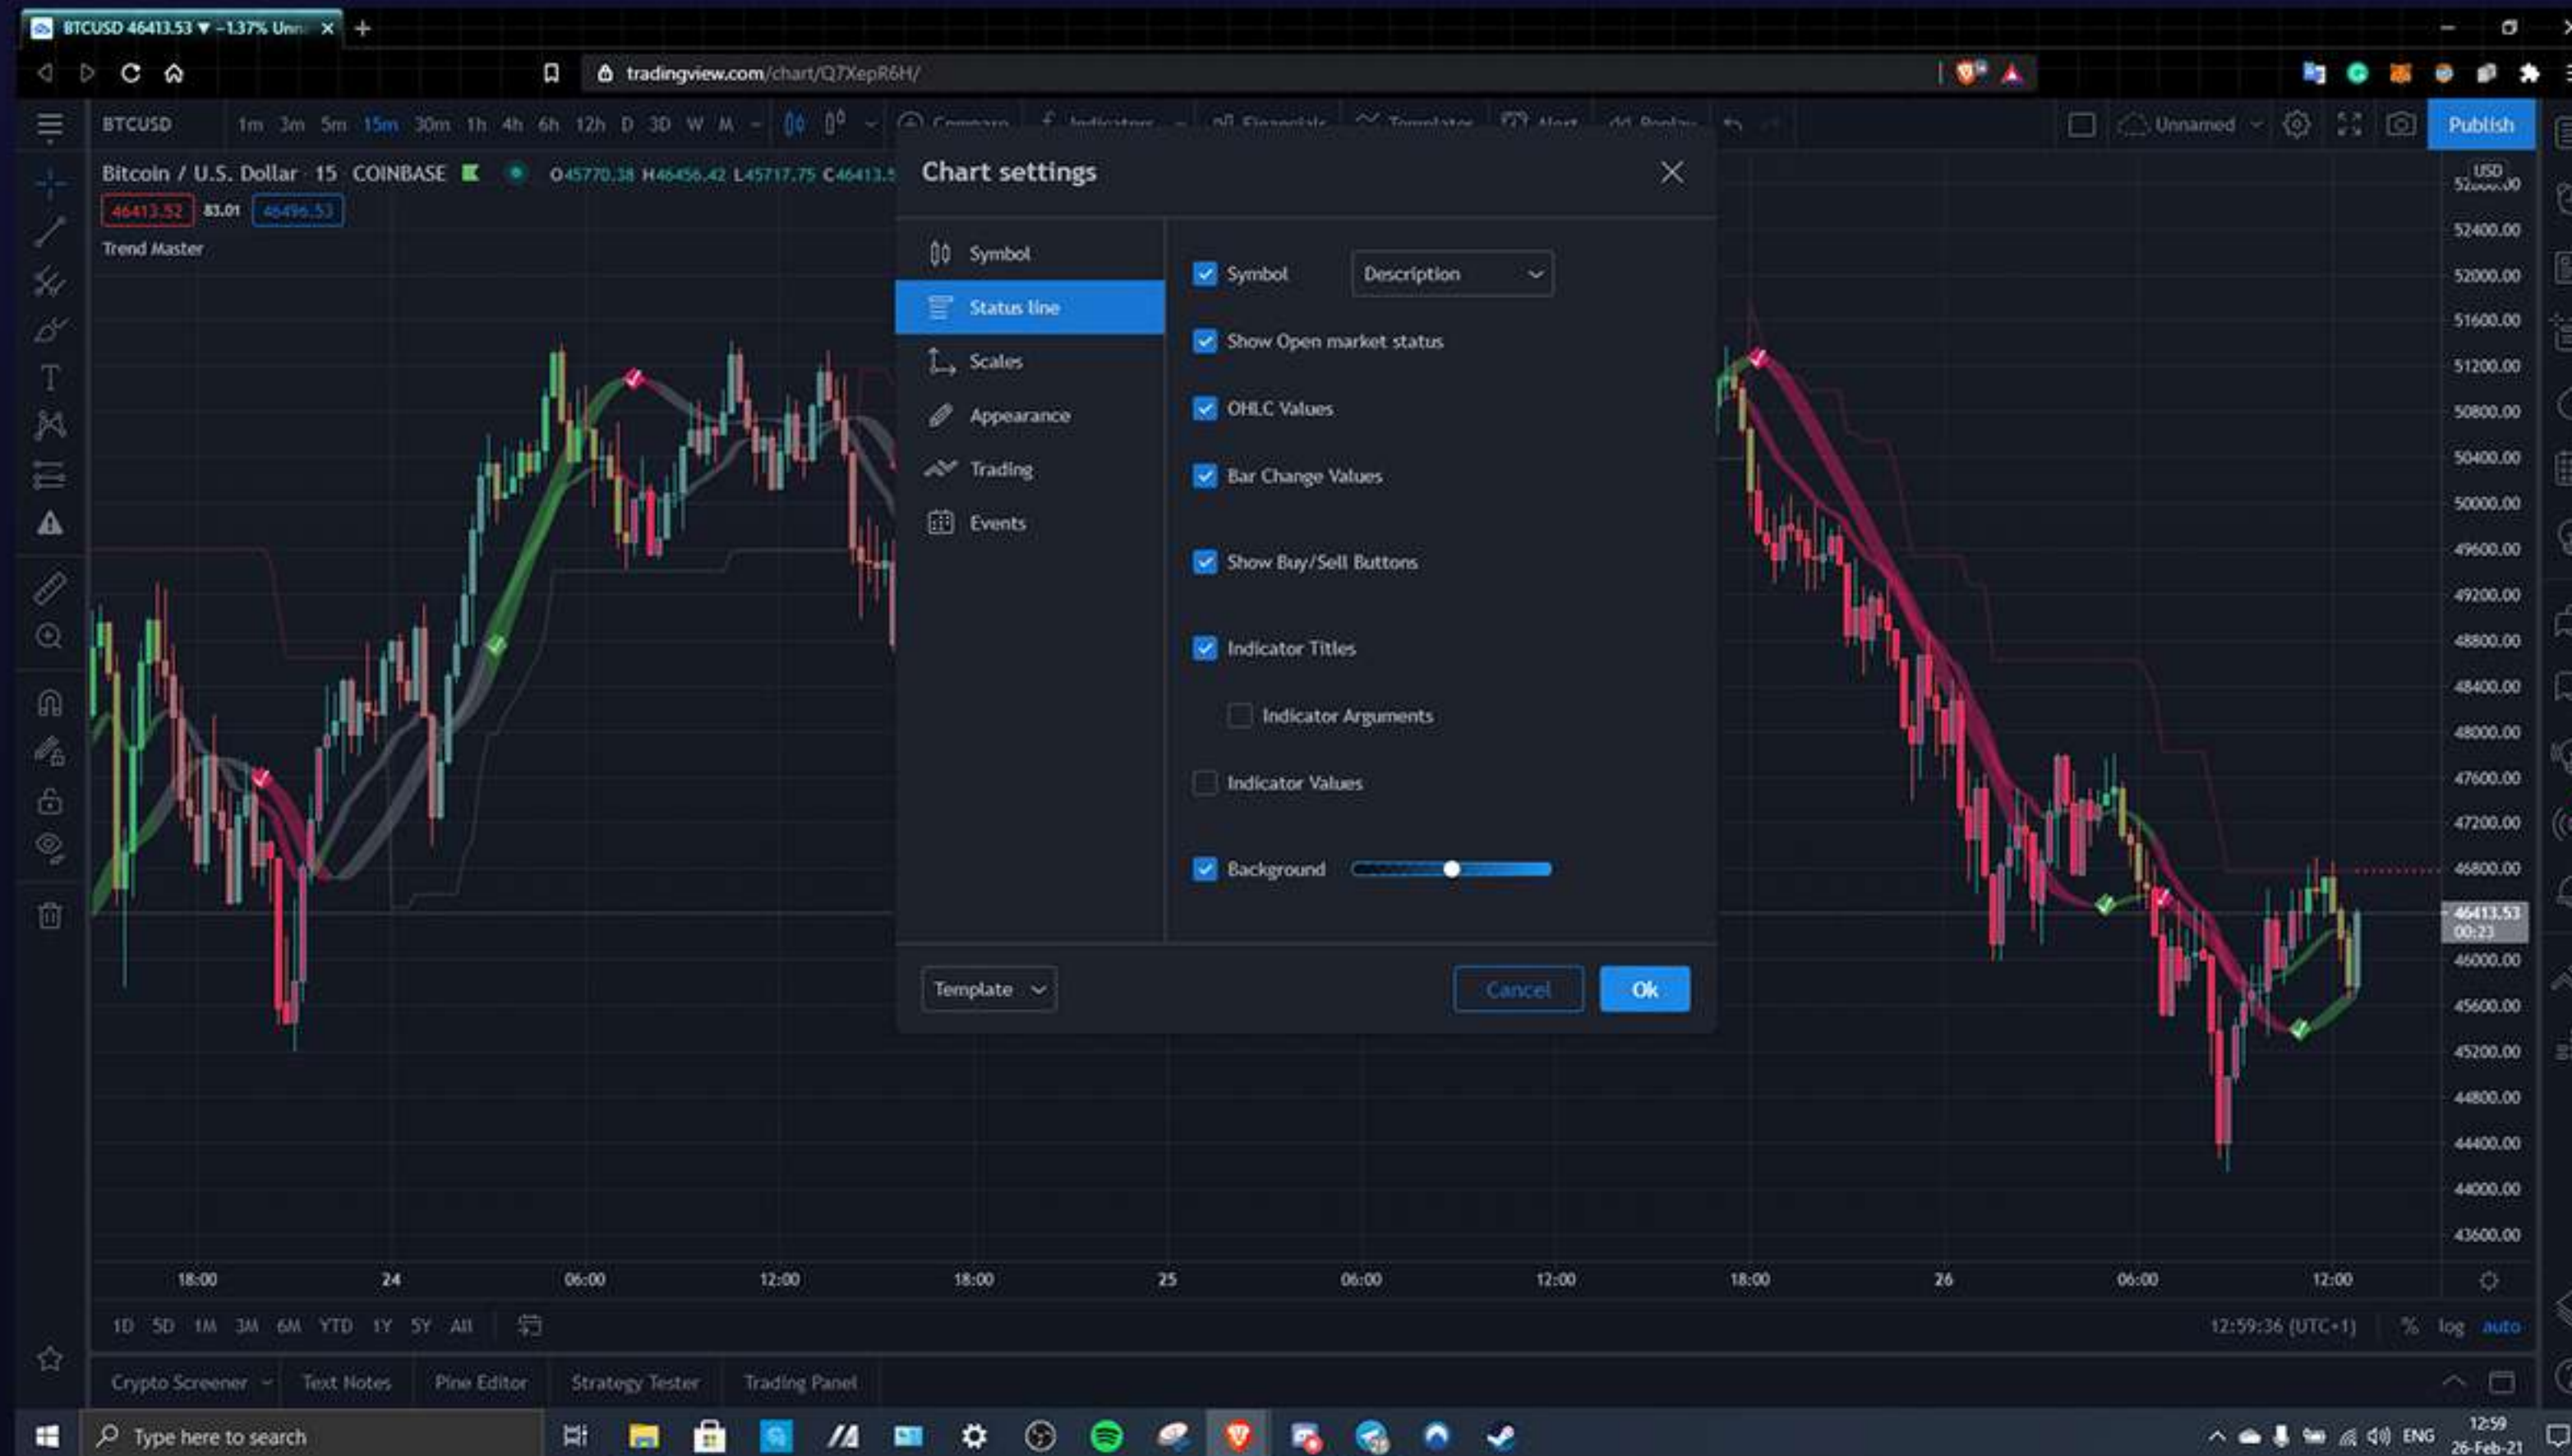

Congratulations on your Premium Membership and welcome to the Vision Crypto Team! It is a REQUIREMENT that you respond to your Patreon Welcome Email with the required information. You must send us your Telegram username as well as your TradingView username otherwise you will not have access to our Premium Content or the Trend Master Indicator.

In order use the Trend Master Indicator you must use the website "TradingView", this is not a suggestion this is a requirement as the Indicator is coded in PineScript and can only be used with "TradingView". If you already have a TradingView account you can skip down to Instruction #2 otherwise follow the step-by-step guide to setup your TradingView account and the Trend Master Indicator.

Once you have your TradingView account set up go onto TradingView and open up a blank chart. Once there select your favorite ticker pair, in this example, we are using BTC/USD (Coinbase). From here just select Indicators and Strategies and in the drop-down menu, scroll to the bottom, and select "Invite-Only Scripts".

Here you should see the Indicator: "Vision Crypto - Trend Master" with a version number attached to it. Click on the star to add it to your favorite indicators and click on the indicator to add it to your chart. You should now see it along with a long line of values in the top left of your chart.

Now that you have the Trend Master on your chart you should remove all the extra values shown to help keep your chart clean.

Go to settings in the top right corner and click on the "Gear Symbol". After you click on that there will be a menu in the center of your screen.

From there click on the sub-section "Status-Line" and scroll down to the settings; "Indicator Arguments", and "Indicator Values". Uncheck these boxes and click ok.

USING THE INDICATOR

© VISION CRYPTO 2021

HIGH TIMEFRAMES & SPOT BUYING

As you can see the Trend Master is godly on high timeframes as well. If you're not familiar here's an annotated example of it killing every important trade in the past 3 years!

Once again the 12hr to 3d timeframes are to show trends, it's very important to check what's going HTF.

We have enabled the crayon setting which shows the trend of the candles by colouring them in on HTF to help.

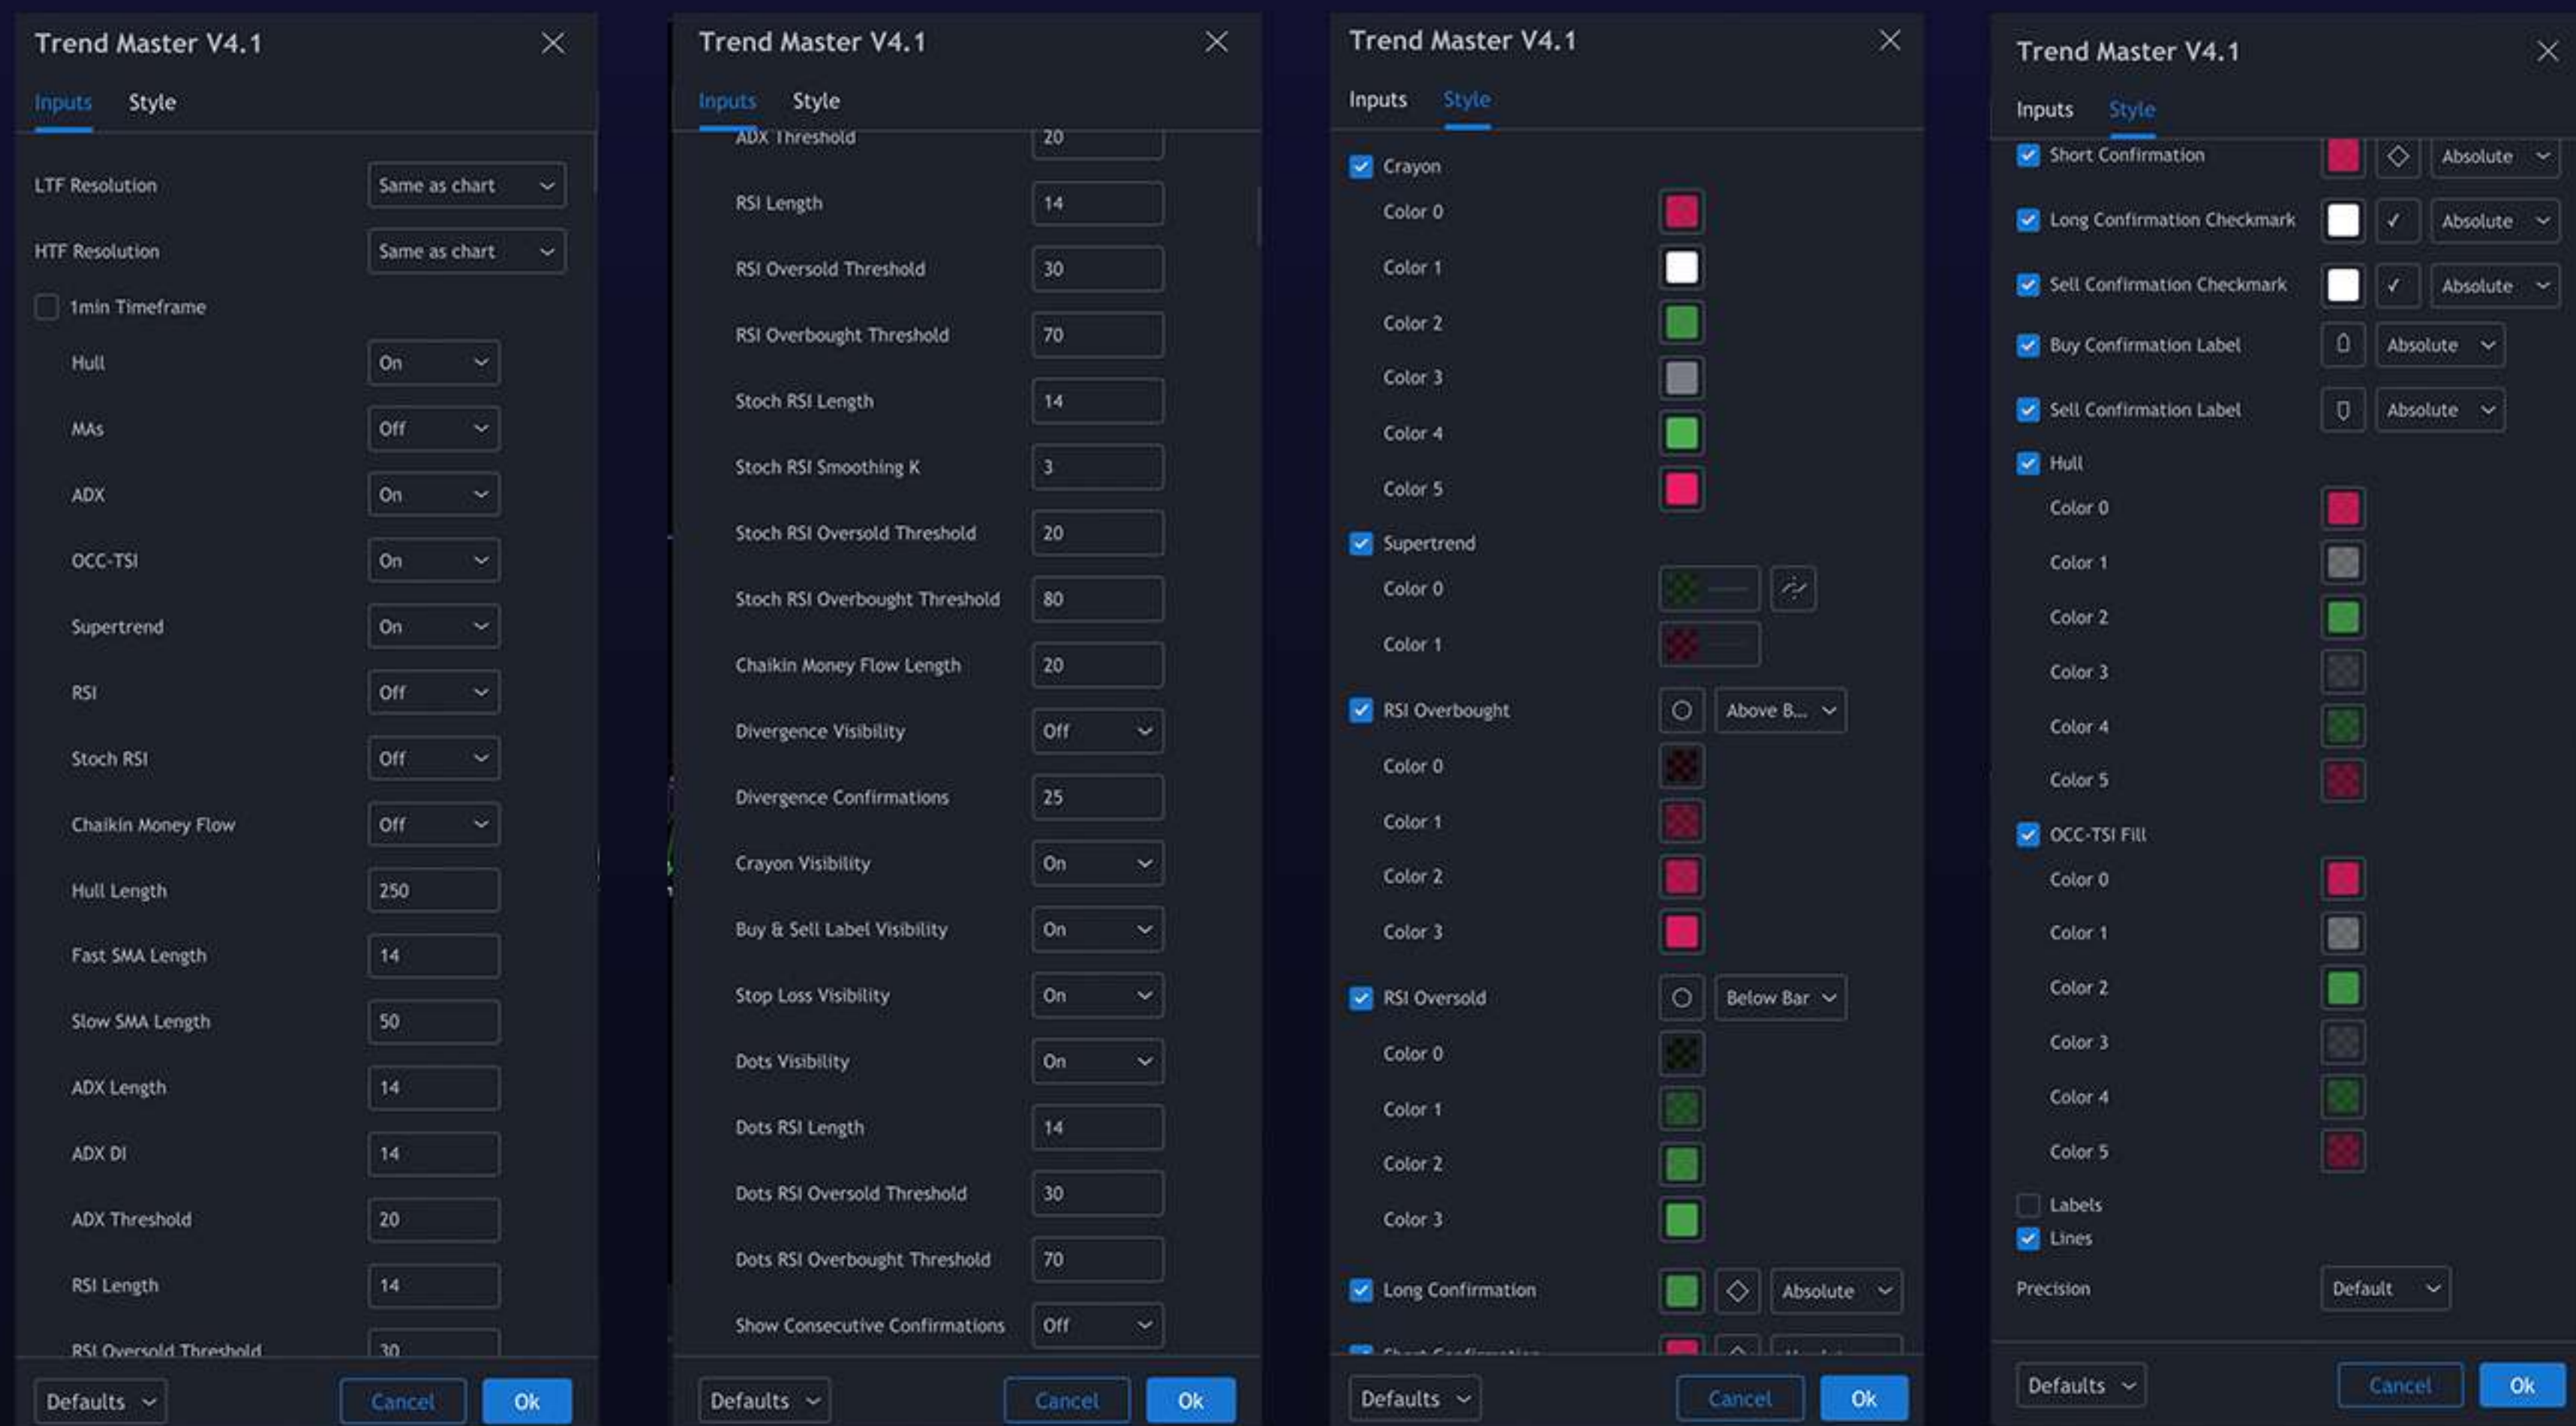

HIGH TIMEFRAMES & SPOT BUYING

Here is a HTF chart with “labels” and “crayon” enabled. Some timeframes have divergence (labels), and crayon turned on however you can turn them off on each timeframes settings or untick them in the “style” tab in settings.

If you have any questions, please don't hesitate to contact @VisionSmallio or @CryptoVikingSWE on Telegram or drop a message in our discord / telegram. Finally thank you for supporting our project & we look forward to chatting to you all in Telegram & Discord!

SETTINGS, DEFAULTS & STYLE

The trendmaster has a ton of settings per timeframe, we've spent hundreds of hours finding the settings we prefer, however if you would like to make some adjustments feel free.

Likewise we have adjusted and set the colours of the indicator to best suite a dark chart. Please change your chart background to #000000 (jet black) for best results or edit the colours.

You can always go to defaults at the bottom and click "reset settings" which will restore our defaults.
