

THE CHALLENGE

GENERAL CONTRACTORS perform the critical role of balancing building performance objectives with costs and deadlines. For building products and materials, this often entails thousands of hours spent supervising up to 2000 different product requirements, coordinating with trade contractors and manufacturers around cost and availability, and arbitrating revisions where necessary. For **DESIGNBUILD** firms, the challenge extends to include oversight of initial product selection, as well.

Ensuring that products meet energy, water, health and/or carbon objectives can add another layer of complication to these workflows - by increasing the work to find and adequately document suitable products, rationalize costs associated with performance, and mitigate tensions between design and budget goals.

BUT NOT ANYMORE.

Ecomedes has solved the product discovery, selection and documentation challenges for over 700,000 sustainably-certified building products.

BEFORE ECOMEDES

AFTER ECOMEDES

Manual web-hunting and phone calls to find data

One place to search over 700,000 products

Differing data and formats

Comparison tables to facilitate product selection

Manual energy and water impact calculations

Graphs of savings and ROI delivered in a few clicks

Time-consuming documentation of contribution to rating systems

Automatically create rating documentation pdfs

"Ecomedes has been an excellent tool for our teams, helping increase collaboration and efficiency in locating responsible products with back-up documentation at our fingertips. We now have more efficient analytical capabilities to help guide our clients and design partners towards achieving the project's sustainability goals."

Ryan Poole, Global Sustainability Leader

DELIVERING RESULTS

130,000 USERS

OVER 1 MILLION PROJECT HOURS SAVED

ESTIMATED \$80 MILLION IN WORKFLOW SAVINGS

OUR CLIENTS

PRODUCT DATA

Client Product Data:

Manufacturers
Trade Associations
GBCI LEED Verified

Data Partners:

Eco-Labels
Certification Bodies
ecoData Platforms

COLLECTION CURATION CULTIVATION

DATA MAPPING

High Performance Sustainability

Green Building Rating Systems

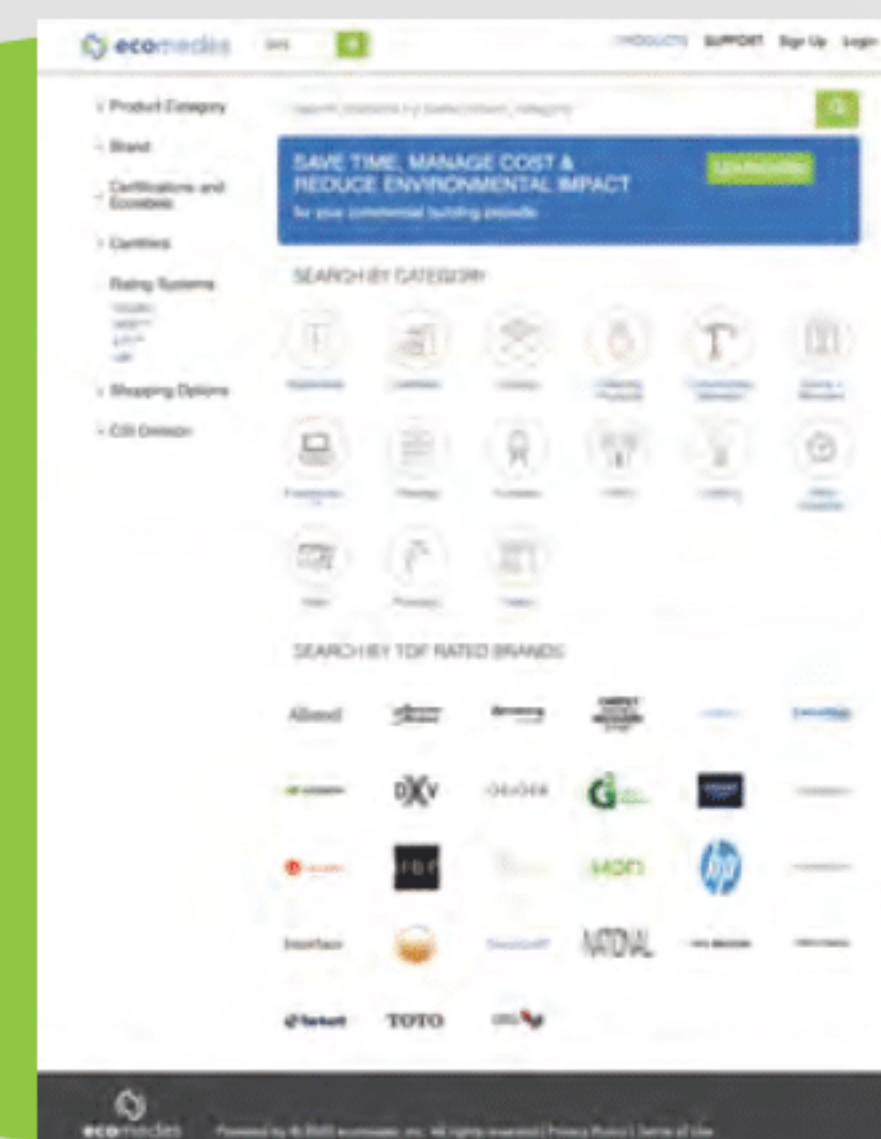

Green Procurement Standards

CONFIGURED PLATFORM

Configured By:

- Mission
- Procurement Requirements
- ROI Analysis
- Impact Tracking

700,000 sustainable building products; 10,000 brands

35+ certification labels; 4 major rating systems

Sourced from ecolabels, certifiers and manufacturers

Search and filter by keyword, product name, brand, category, CSI division, availability by location, where to buy, and more

Analytics to compare products, evaluate for watts and water savings, and select by an impact score

One-click documentation, exportable to pdf
