The Pleasure Point area of Cape Cod is historically one of the largest oyster fisheries in Massachusetts. Pleasure Point Oysters are known for easy-opening "restaurant ready" oysters packed in 100-count bags or boxes. A state-of-the-art oyster cleaning and packing system is utilized to ensure a consistent manicured product. Pleasure Point Oysters are produced by a vertically integrated producer from hatchery to finished product.

The oysters themselves are packed in a 3rd party audited facility and the product is handled quickly under strict HAACP guidelines to ensure freshness and quality to the end user. **Pleasure Point Oysters are available for the month of February.**

Valentine's Day has origins in the Roman festival of Lupercalia, held in mid-February. The festival, which celebrated the coming of spring, included fertility rites and the pairing off of women with men by lottery. At the end of the 5th century, Pope Gelasius I replaced Lupercalia with St. Valentine's Day. We do not condone marriage lotteries but do condone, oyster eating.

The Oyster Aphrodisiac

In 2005, some interesting research came out showing that there are indeed two weird and unusual amino acids found in oysters that were shown - at least in animals - to increase testosterone production. Now, testosterone is indeed a hormone that affects sexual desire in both sexes. But desire is complex, and it depends on many factors and circumstances.

Part of oysters' aphrodisiac "brand" is the sensuality of the eating experience itself. And since desire all happens in the organ between your ears, anything you think is an aphrodisiac can easily become an aphrodisiac. It just doesn't have much to do with zinc or amino acids.

We don't think Pleasure Points are an aphrodisiac. we know.
