

Agentless Secure Collaboration via Secure Send

Secure Send expands how organizations protect data shared outside the organization while ensuring visibility, security, and control.

Secure Send is ideal for organizations that need to protect data no matter where it is stored. Be it on-premise or in the cloud, solutions such as SharePoint, Dropbox or Google Drive work natively with SecureCircle without changing how users interact with the data. No agent installation is required for Secure Send recipients. SecureCircle is a transparent first line of defense protecting organizations from external threats, insider threats (accidental and malicious), lost or stolen devices, ransomware (releasing private data to the public), and shadow IT.

Secure Send Enables

Sharing of data with Secure Send enables business to keep existing workflows and applications while gaining full visibility, tracking and accountability. SecureSend does not require the recipient to install any software and enables continuous protection.

Secure Send allows for various workflows:

- Safe transport of data to customers or partners that results in the recipient receiving unprotected data.
- Secure collaboration with recipients viewing and editing data in the Office 365 application. Secured versions of the data can be downloaded locally.

Authorized users within the organization can send data through a variety of methods such as an Outlook plugin, email attachment or through any other medium, for example, FTP, USB, CD-ROM, etc... Secure Send is also integrated natively with Microsoft SharePoint, OneDrive and Office365.

Intended recipients receive an email with instructions to navigate to a browser-based portal to access the protected data. Based on policy, recipients will be able to view data online in the browser, download unprotected version of the data, or edit Office365-based files online with the option to save the protected files locally.

Administrators manage the sharing policy settings such as time-to-live (TTL) and the number of accesses allowed by recipient. Permissions can be changed at any time.

First Line of Defense

SecureCircle enables organizations to protect data that should never leave the organization.

External Threats

Insider Threat (accidental)

Insider Threat (malicious)

Lost & Stolen Device

Ransomware (releasing to public)

Shadow IT

Second Line of Defense

SecureCircle's Secure Send features enables organizations to securely send and collaborate with external users.

Collaboration

Secure Data Transfer

Who is SecureCircle?

SecureCircle delivers a SaaS-based cybersecurity service that extends Zero Trust security to data on the endpoint. At SecureCircle, we believe frictionless data security drives business value for our customers. Instead of relying on complex reactive measures, we simply secure data persistently in transit, at rest, and even in use. End users operate without obstacles, while data is continuously secured against breaches and insider threats.

What data can we help you secure?

At SecureCircle, our goal is to deliver truly frictionless security for our customers' most valuable data. We focus on securing data persistently and transparently to deliver business value for our customers. We are always looking for ways to help improve our customers' data security.
