

Quick aid – always available

HARTMANN Trauma-Box[®]

New:
Trauma-Box[®]

Save lives – Stop bleeding!

Globally more deaths are accounted to accidents (5.8 million) than to diseases (like malaria, tuberculosis and HIV)¹. One of the most common reasons to accident related deaths is “bleeding to death”. This is avoidable. Large wounds can lead to fatal bleeding within seconds. A simple treatment of major wounds can save lives.

Trauma-Box[®]

is a first-aid kit to immediately stop bleeding until medical assistance arrives. It was developed in co-operation with the German foundation for trauma and IVF HARTMANN AG. Trauma-Box[®] can be used by novices or healthcare specialists.

Everyone can be a life-saver

No matter if you are a medical specialist or unskilled – everybody can save lives in an emergency. Thanks to the enclosed instructions Trauma-Box[®] can be applied by everybody. Effective first aid is at your hands.

Usage

Trauma-Box-Bag: paramedics and emergency crews can carry the bag in their ambulance or as carry-on pouch – i.e. on their belts.

Trauma-Box-Dispenser: is wall mounted and should be placed at visible locations in companies and public facilities. It is best suited in crowded locations such as airports, train stations and shopping malls.

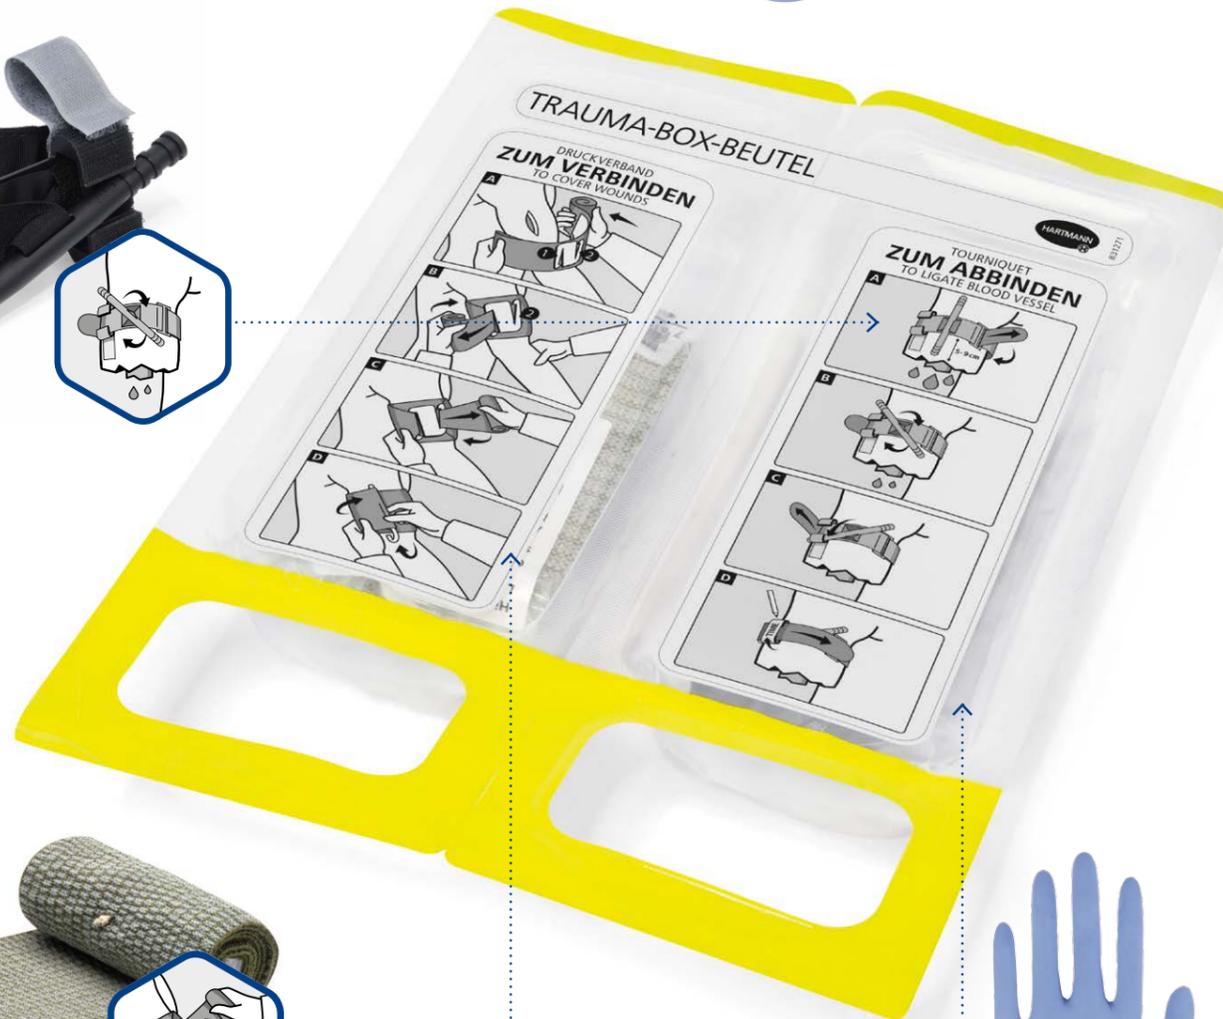

Tourniquet

Practice-proven tourniquet to stop strongly bleeding wounds or detached extremities.

Pressure bandage

To stop strongly bleeding wounds the bandage is equipped with an absorbent wound dressing and a pressure applicator. It is especially designed for armies and emergency management staff.

«Bleeding to death is the number one cause of death in accidents. The immediate availability of a simple set to stop severe bleedings will save lives. The comprehensive availability of Trauma-Box[®] will provide medical care to the severely injured anytime and anyplace.»

Prof. Dr. med. Florian Gebhard
Vice president of
the German foundation for trauma

«Bleeding to death is one of the main death causes by injuries. Therefore, measures to stop severe bleedings have the highest priority. Thanks to Trauma-Box[®], even medical novices can directly and effectively avoid bleeding to death.»

Prof. Dr. Matthias Helm, OTA
Member of the executive committee
of the German foundation for trauma

68%

of avoidable deaths in emergency-rescue occur because of bleedings.²

#1

Severe bleeding induced by traumatic injuries is the most avoidable cause of death outside hospitals.

365

Severe injuries happen every day.

A simple aid that can be applied by everybody saves lives within the first crucial minutes of the injury.

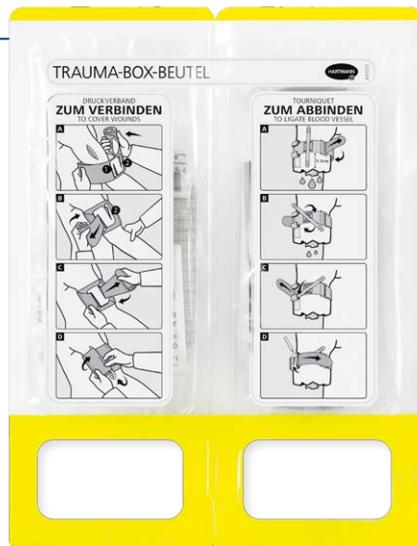

Examination gloves
to protect helpers and victims
