How the Mighty Fall: Our Corporate Obsession with Growth, Luck, and Power

Phillip Condit, former CEO of Boeing, and Charles Duhigg, author of The Power of Habit, present a cautionary tale about the fall of large corporations. They discuss how companies can turn around, and the appendices include detailed evidence and data to support their arguments.

In Charlene Li’s latest book, Open Leadership and Social Networking, she illustrates ways that social networking can transform the way we lead organizations. Li’s basic premise is that we lead organizations. Li's basic premise is that we are in an era where information, and the networked and social networks, are key to our success.

Diane Ravitch Takes a Different Path

In Third Teacher: 79 Ways You Can Use Design to Transform Education, Stephanie Izard and Mihaly Csikszentmihalyi, Linda Darling-Hammond, Maxine Greene, and Diane Ravitch reflect on the fate of libraries to come. Beyond discussing the importance of libraries, they also propose new ways of thinking about education.

An increasing number of students use stimulants on campus, Professor Alan DeSantis studied student use of stimulants on college campuses. Students don't view it as harmful or negative but rather similar to "a performance enhancer." The study is important because it helps educators understand the evolving needs of their students and the impact of projects like Google Book Search (GBS) on the skill sets of librarians as curators of knowledge.

Dan Meyer

A passionate educator and Google teacher, Dan Meyer advocates for an evolving need for students and the importance of authentic problem solving through relevant scenarios. He serves as an excellent resource for math teachers and an independent school media selected by and recommended articles, PEARL.

If You Build It, They Will Come

At first glance, educators might overlook this gem of the 21st century. Jeremy Mihalik and Craig Ross are the creators of this project, which is based on the idea that education programs may want to track the number of experiments and reading, particularly about space. The study is important because it helps educators understand the evolving needs of their students and the impact of projects like Google Book Search (GBS) on the skill sets of librarians as curators of knowledge.
