

Your team is overloaded with creating solid freight quotations that hit the mark. Quote too low, and you take a loss. Too high, and shippers won't bite. Unactionable indices, fluctuating markets and auction portals wear sales representatives down. Autonomous quotation provides a cutting-edge solution for fast and accurate quote generation.

WE DRIVE RESULTS >>

**Increase in Bid
Win Rate**

Win More Loads

TNX machine learning helps ensure offers are priced accurately and are enticing to increase the average win rate for logistics service providers.

**< 2-second
Quote Generation**

Speed is King

Automation provides instant quote generation, which is multiple times faster than manual quoting—even for the fastest account manager. Shippers often award bids to the first carrier that submits, so be the first in line. Integrate our API directly into your TMS, letting data science and our automated rules engine do the rest.

**Price Prediction
Accuracy**

Grow Margins

Accurate quotes ensure top logistics service providers win more business while also optimizing the bottom line. Predict rates based on your unique data, real-time market trends, carrier behavior, and more.

**More Efficiency
(Reps + Hours)**

Gain Productivity

Account managers typically spend 5-20 minutes researching and negotiating tenders. Our automated quotation takes less than two seconds to generate and can be instantly shared externally.

PRODUCT ADVANTAGES »

Instant and Reliable Price Prediction

Price predictions are personalized to your business and buying power as opposed to using a broad-brush market index. On average, Autonomous Quotation is 25% more accurate in comparison to market indexes.

Customized Margins

This is NOT a one-size-fits-all calculator. A smart interface and user-friendly tool make it easy to set your margins and self-configure the rules for each quote.

Automated Quotation Generation Based on Business Rules

Leverage shipment characteristics, unique customer requirements, and our sophisticated business rules engine to produce real-time quotes. Rules can consider dozens of characteristics, including buy-sell side margins, equipment type, distance, pickup/delivery windows, stop location, and more.

Analytics and Win/Loss Feedback

Transporeon provides a data lake and data visual exploration toolkit that sits over the quotation data. By sending Transporeon the outcome data (win-loss and actual buy rate) the Transporeon data lake and analytics will contain all the necessary points for performance managing the quoting process.

TNX by Transporeon helps logistics service providers achieve more without overloading their sales and pricing teams. Our platform identifies and exploits market patterns, automates the full quotation process, while ensuring speed and pricing accuracy.
