

Create transparency over your data assets and leverage them to create business value

With constantly growing amounts of data it is becoming more and more difficult to use this data efficiently. Valuable insights and further added value only become available with high quality and intelligently managed data. With the Contiamo Data Platform, we help our customers to create transparency about their data and to use it in an optimal way. Our tool automatically scans and indexes all available data and makes it accessible in a secure way.

Data Inventory Management

Gain and keep a clear picture of your data landscape

Connect to any cloud or on-premise data source in your system landscape

Catalog and check your data automatically

Use a comfortable yet powerful search to browse your data

Create transparency

Improve quality and avoid redundancies

Find relationships and dependencies within your data

Make the data easily accessible

Improved data access and analysis

Use your data in a performant and intuitive way

Create materialized datasets for optimized performance and reduce the impact on original datasources

Combine data with queries across multiple datasources

Integrate via 1-click with your favorite BI-Tools (e.g. Tableau, Power-BI, Qlick...)

Modern, open and future proof APIs to work with your data

Optimize access and approval processes

Enable self-service with curated data sets

Define responsibilities and contact persons

Accelerate your data analyses by 70%

Connect to all data sources quick and easy

Integrate Data Science, Machine Learning and BI Tools

Deploy in the cloud or on-premise with full security and scalability

Case Study

360 degree customer journey at Deutsche Telekom

170+
Data sources

> 750
Reports

> 380
User

Deutsche Telekom uses our data catalog and integration layer to harmonize, retrieve and visualize more than 170 data sources that contain customer-related data. Intelligent analyses are performed via more than 20 touchpoints (e.g. Telekom.de, MeinMagenta App, Entertain...). This enables the optimization of campaigns and customer journeys as well as the derivation and tracking of relevant measures. With our tool Deutsche Telekom makes data easily accessible and enables intelligent decisions based on facts and figures.
