

# OEM DATA DELIVERY BT-5V

Bluetooth Node

The BT-5V is a Bluetooth® enabled device that allows for the reconciliation of non-powered assets on your job site, yard and in your shop. The BT tag broadcasts its presence to EquipmentShare trackers within range to allow you to easily locate and recover assets, and to help reduce the expense of those that might otherwise be lost or left behind when your job is done.

The BT-5V can also detect vibration when securely affixed to an asset, allowing you to also track tool and attachment utilization in certain scenarios.

## INSTALLATION OVERVIEW

Mount on a solid, flat surface using either: screws through the mounting tabs, permanent epoxy on a surface cleaned with isopropyl alcohol, or an optional EquipmentShare metal housing that provides additional protection in rough environments. To activate the device, the magnet (if still applied) must be removed prior to installation.

### SPECIFICATIONS

Power Requirements	Internal Battery - Non-replaceable
Battery	Extended Temperature Lithium
Battery Life	Up to 2 years
Operating Temperature	-40° to +70° C
IP Rating	IP67
Bluetooth Distance	Up to 100 yards – Line of Sight
Bluetooth Frequency	2.45GHz, 802.15.4 Compliant
Dimensions	2.08" x 1.28" x .45"
