

OEM DATA DELIVERY BT-2

Bluetooth Node

The BT-2 is a Bluetooth® enabled device that allows for the reconciliation of small, non-powered assets on your job site, yard, and in your shop. The BT tag broadcasts its presence to EquipmentShare trackers within range to allow you to easily locate and recover assets, and to help reduce the expense of those that might otherwise be lost or left behind when your job is done.

INSTALLATION OVERVIEW

Mount using cable ties or screws through mounting tabs, or use a permanent epoxy on a surface cleaned with isopropyl alcohol. To activate the device, the magnet (if still applied) must be removed prior to installation.
