

QuikTurn90™ Target System

InVeris' QuikTurn90™ Target System is a series of target stands linked by connecting tie rods to a single drive unit, ensuring the targets expose and conceal in unison. Timed target turning is controlled by the RangeMaster™ (RM9K) providing advanced wireless and touch screen technologies for convenience and flexibility in range control operations.

The QuikTurn90 Target System provides a host of valuable features:

- Suitable for both indoor and outdoor ranges, the QuikTurn90 Targets are secured to a concrete pad or suitable foundation and may be sheltered by a berm or other ballistic guard.
- Timed target turning is controlled by the Model EC16 range timer that selectively controls the target functions.
- The range timer is portable and/or can be permanently located in a control room or tower.
- Target expose, conceal, cycles and pre-course delay times are set in one second increments from zero to 999 seconds. The course may be programmed to repeat up to 999 times.
- The RM9K loads a preset training course from the internal memory, displaying current course settings.
- A wireless tablet provides operator prompts to assist in each programming step, and targets may be exposed and concealed manually from the range timer when no course is running.

- Systems available with up to 10 or 26 target stands per drive unit.
- Target stands are available with a variety of target frames, pending the type of targets utilized.
