Highest productivity without limits

KERN Micro\textsubscript{HD}
The new standard in precision manufacturing

With the newly developed **micro-gap hydrostatics**, the **linear drives** and the advanced **KERN temperature management**, the KERN Micro HD is the new benchmark in **precision, long-term stability and dynamics**. Together with the know-how of our customers and the KERN application technology, the KERN Micro HD is unmatched.

The KERN Micro HD is the solution for high-precision serial - and prototype - production and when the question comes up whether production is still possible. This system is based on the second generation of KERN Micro, which was launched in 2019, and relies on proven, high-quality KERN technology. It provides absolute reliability and stability over a long machine life. The new KERN micro-gap hydrostatics is combined with the powerful linear motor drives in the integral axis system. This combination creates a unique drive system that sets new standards in precision, stability, dynamics and freedom of wear. The KERN Micro HD works more accurate and more productive than other 5-axis milling machines when the demands become extreme. With hydrostatic, direct drives and a unique design this compact system can easily meet the highest requirements. This results in highest availability, maximum output rate and minimum reject rate, as well as low maintenance costs, versatile and flexible applications and a significant competitive advantage for the user.

**AT A GLANCE**

- Compact design and small footprint of less than 54 sqft/5 m²
- Supreme machine stability with advanced KERN temperature management
- High dynamics and productivity through integrated linear motor drives
- Best quality and wear-free due to innovative KERN micro-gap hydrostatics
- Multi-shift operation with no need for operator with integrated changer for up to 210 tools and a maximum of 60 workpieces
- Certified interfaces for additional accessories and automation systems
- Management and maintenance during operation without interruption while machine is running

"The **KERN Micro** HD embodies the technology for manufacturing at the limit of what is feasible. Our system for highest possible precision, quality and stability."
Innovative KERN micro-gap hydrostatics

The KERN hydrostatics with micro-gap is an absolute novelty in mechanical engineering and, compared to conventional hydrostatic systems with only 5 μm gap height, it is particularly energy-saving. The micro-gap also ensures the highest possible rigidity and perfect damping properties, which can be seen and measured in the surface quality and the accuracy of the workpiece. The actively temperature-controlled aluminium axes and the hydrostatic fluids guarantee a maximum stability even under non-ideal conditions. This also guarantees a consistently perfect quality of workpieces in serial operation. The new axes system was developed over three years and tested under real conditions in our contract machine shop, where it was optimized until it overcame all existing standards.

Linear direct drive

Linear motors are a popular drive system in machine tools with advantages in terms of dynamics and control accuracy. However, due to the enormous heat input, the system was only of limited suitability for high-precision machines. In the new KERN Micro HD, KERN installs high-quality, large-dimensioned and actively temperature-controlled linear motors for a supreme drive of the axes in integral design. This integration into the hydrostatic system consistently minimizes the heat input and thus eliminates unwanted side effects. The combination of KERN micro-gap hydrostatics and linear motors is unique and unmatched in its performance.
Advanced KERN Temperature Management

Already many years ago KERN announced the fight against the negative influence of temperature deviations in the accuracy system of a machine tool. Great efforts have been made to develop methods that eliminate these effects. In the KERN Micro HD the KERN temperature management system of the next generation is implemented. This new system generates significantly higher flow rates and an even more precise control, both lead to the greatest possible stability. This stability allows unsurpassed repeatability of parts and the greatest possible independence from external influences.

Flow: 160 - 200 l/min
Temperature: 20 °C ± 0,05 K
Temperature difference flow/return flow: < 0,5 K

• Machine base
• Coolants
  - Cooling lubricants
  - Liquids of hydrostatics
• Control Cabinet
• Spindle
• Rotary and swivel axes
  - Direct drive
  - Bearings and rotor
• Linear axes
  - Direct drive
  - Heat conduction barrier
  - Secondary part
  - Structure

Stress test Temperature Management

A very important factor for achieving the perfect workpiece geometries is the mastering of temperature influences on a machine tool. This is especially true when working with 5-axis. KERN compensates this challenge with a four-stage temperature control in the linear axes of the KERN Micro HD.

In the first stage, a large part of the heat is already dissipated directly at the source, at the motor windings of the linear motors. In the second stage, the heat of the secondary parts is dissipated. The third stage prevents heat transfer into the structure of the machine.

In the fourth stage, the structure itself is tempered, which makes the machine very robust against the effects of heat from the workshop environment.

All four levels of temperature control are supplied by the second-generation KERN advanced temperature management system.

Four-stage axes temperature control

With the combination of the extended second-generation KERN temperature management and the four-stage axes cooling a new thermal stability is generated. With this thermal stability tolerances in the low single-digit micrometer range as well as highest surface qualities can easily be achieved.

Temperature management: Stress test with toughest conditions for the stability of temperature of the machine - the new temperature management of the KERN Micro HD delivers convincing results

Cooling Concept

The test in the climatic chamber shows the performance of the KERN temperature management via colour graduation
SMALL AND POWERFUL
Compact and powerful because of the smart one-box design. All accessories are integrated in the machine and the hybrid unit. With a footprint of less than 5 m² (54 sqft), an optimized height of only 2.63 m (8.8 ft) and a narrow width of only 1.63 m (5.42 ft). The weight with hybrid unit is less than 6 t (13228 lbs).

SOLID BASIS
Innovative machine stand made of UHPC (Ultra High Performance Concrete). No disruptive interfaces, thermo-symmetrically constructed, made from a single casting and equipped with unique material properties.

UNMATCHED IN THE 5TH DIMENSION
Powerful and highly dynamic rotary / swivel axis with torque motors for simultaneous 5-axis machining, market-tested and continuously optimized. Perfect use of available working space and thus it is possible to work on larger workpieces - smart design and best possible arrangement of the 5 axes offer more space.

MAINTENANCE AND PRODUCTION – ALL AT THE SAME TIME
The well-arranged and fully accessible maintenance area on the side of the machine allows checks and re-filling of lubricants without machine downtime. In addition, necessary maintenance work can be recognized at a glance.

100% AUTOMATION
An effective automation solution is often the key to cost-effectiveness. The integrated tool cabinet for up to 210 tools and a maximum of 60 workpieces allows unattended operation without additional space requirements. Whether external or internal workpiece changer, the KERN Micro HD is perfectly prepared.

INTEGRATED CONTROL PANEL
There is no better way to integrate an ergonomic control panel into a machine to save space. When not in use, the control panel can be folded down and swiveled back to align straight with the machine and does not require additional space in front of the machine. Completely swung out, it offers the same ergonomics as a control panel supported by an extendable supporting arm, no compromise necessary.

PERFECTLY INTEGRATED
Additional components such as a flood cooling unit can be integrated into the machine without requiring additional space. Also, the connection of the optional belt filter system and the chip conveyor has been optimized to save space.

HYBRID UNIT
Best machining quality and most flexibility for the footprint. The hybrid unit of the Micro HD includes the optimized KERN temperature management as well as the hydraulic devices and effectively separates vibration sources from the machine stand. If needed, the hybrid unit can be positioned in different places around the machine.
Multi-Feature Benchmark

Our benchmark part demands sophisticated machining and shows what a machine can do without adjustments and corrections on the first part. This part provides the solutions for almost all the requirements from different industries brought to us over the past years.

**CHESS BOARD**
Machining of 9 surfaces with an identical Z-dimension, each surface being machined with different angular position of the B/C axis.

Visualizing the thermal stability of the axis system and the optimal position of the kinematics point.

**STEP TEST**
Machined step geometry using different tool types and geometries as well as a variation in parameters.

Truth of geometry despite the use of different parameters such as RPM, cutter shape and diameter.

**CUTTING CAPACITY**
Cutting stainless steel 4305 with a 10 mm HPC cutter using HSC and HPC milling strategies.

Displaying the high cutting capabilities of a high-precision milling machine with micro-gap hydrostatics in comparison to a market-leading precision machine.

**TRUTH OF DIMENSION ON 5 - AXES**
Highly dynamic machining of pockets and holes, simultaneously with 3-axis as well as 5-axis, for the production of high-precision seal seats.

Showing the truth of dimension in X/Y/Z using the same features in different positions with repeated iteration.

**HIGH SPEED CUTTING**
Dynamic trochoidal milling of a notch with a 4 mm end mill and an 11 mm through-hole.

Demonstration of the productivity of dynamic trochoidal milling with a motion of only 1% of the cutter diameter.

**FREEFORM SURFACE**
3-axis machining of a freeform surface with a 4 mm ball-nose mill.

Optical display of reversing tips and smoothness with the milled freeform surface and the circumferential sealing surface.
COOLANT THROUGH SPINDLE
Optional rotary union to cool tools internally with water-based coolant or cutting oil in combination with belt filter.
Pressure: Cooling lubricant 80 bar / compressed air 6 bar.

BAND FILTER AND CHIP CONVEYOR
Integrated chip conveyor with ejection to the rear. Connected to the external belt filter system, optionally with high pressure for ICS. Tank capacity: 490 l (108 gallons).

WORKPIECE CHANGER
Integrated workpiece changer for up to 60 work pieces allow unmanned operation without additional space requirements. The KERN Micro HD runs fully automated via internal, external workpiece changers or hybrid variants.

ENLARGED SWIVEL RANGE
Extension of the swivel range of the B axis. Easy cleaning of workpieces, especially in automated operation. Swivel range: -180° / +110° (standard ± 110°).

DYNAMIC COLLISION MONITORING (DCM)
Software for real-time collision monitoring of the workspace components (rotary and swivel table, laser, clamping device, spindle and tool holder) in manual and automatic operation.

REMOTE SERVICE
Remote diagnostic with online access for a fast analysis by the KERN service department and process optimization of the KERN Micro HD through KERN application engineers.

POWER PACK
To optimize the overall energy consumption as well as to increase the productivity and to ensure maximum availability of the machine.

JIG GRINDING PACKAGE
Fully integrated jig grinding package with dressing spindle, fluid and acoustic emission sensor. Heidenhain jig grinding cycles integrated user-friendly into the machine control.

BDE INTERFACE
Individual monitoring of machine and operating data for control and evaluation in the customer’s own system (Industry 4.0).

INNOVATIVE CALIBRATION PACK
Automatic checking, verification and fine adjustment of the kinematics directly on the machine by the customer.

PRODUCTIVITY PACKAGE 2
Individual compensation of all heat-introducing components of the machine for highest accuracy and productivity without additional warm-up times.

BLUM LASER LC 50
Laser measuring system with DIGILOG technology. For tool presetting as well as breakage and wear control. Also suitable for smallest tool diameters. Including calibration mandrel with tool holder.
**Technical Details**

### Linear axes
- Travel X/Y/Z: 350/220/250 mm
- Max. clamping surface: Ø 350 x 200 mm
- Max. workpiece weight: 50 kg (110.23 lbs)
- Feed rate: 60 m/min (2,362 in/min)
- Acceleration: up to 20 m/s²

### Rotary and swivel axes
- Rotary axis: 360° infinite / 200 rpm
- Swivel axis: 220° (opt. 280°) / 100 rpm
- Clamping swivel axis: 300 Nm

### Spindle options
- HSK 25-E: 50,000 rpm 6 kW (S1) Roller bearing
- HSK 25-E: 80,000 rpm 5.5 kW (S1) Air bearing
- HSK 32-E: 40,000 rpm 6.3 kW (S1) Roller bearing
- HSK 40-E: 42,000 rpm 15 kW (S1) Roller bearing

### Workpiece size
- Height up to 200 mm (7.88 in)
- Diameter up to 350 mm (13.78 in)

### Accuracies (VDI/DGQ 3441)
- Positioning accuracy P: < 1 µm
- Repeatability Ps: < 0.5 µm

### Accuracies (ISO 230-4)
- Circular deviation Gyz: ≤ 1 µm
- Circular deviation Gxy: ≤ 1 µm

### Tool changer
- HSK 40: 18-, 102- and 210-pockets
- Max. tool diameter: 70 mm (2.76 in)
- Max. tool length: 155 mm (6.10 in)
- Optional: Combination of tool and workpiece changer

### Technology
- Internal temperature management with ± 50 mK control accuracy
- 5-axis simultaneous machining
- Heidenhain control TNC 640
- Ultra-compact one-box design
- Integral design of micro-gap hydrostatics and linear direct drives

### Dimension and Weight
- Weight: 5,500 kg (12,125.42 lbs)
- + hybrid unit 400 kg (881.85 lbs)
- Min. space required W / D / H: 1.63 x 2.66 x 2.63 m (4.92 x 8.73 x 8.63 ft)
