

Playlands attract parents by freeing them up from the distractions of bored, tired and roaming children, helping to make their overall shopping or dining experience more enjoyable with the likelihood they will visit more often, stay longer and spend more. Businesses with a Playland are making a 'child friendly' statement; they are acknowledging the importance of families, differentiating their business & enjoying increased revenue. Playland solutions are targeted at children up to five years of age and characterised by the inclusion of balustrades around a play area to control circulation and have a distinct entry/exit that can be supervised. Playlands require no special room or walls and can be easily dismantled and relocated as needs change. They are flexible and take up very little space, whilst still offering high levels of safety and play capacity. Playtec design different types of Playlands to suit the different requirements of different businesses. If you are a shopping centre, club, hotel, fitness centre or general retailer please review the elevated and low level Playland designs in this brochure and please remember we can design one to suit your particular needs of your business be it available space and/or any other requirements.
