An overview of CoreView

The #1 Microsoft 365 management platform

For today's IT leaders and global admins, managing Microsoft 365 permissions, licenses, chargebacks, and compliance for thousands of employees – across different business units and locations – has become complete chaos. And that chaos comes at a high cost in terms of productivity lost, projects stalled and dollars wasted.

About CoreView

CoreView is the #1 Microsoft 365 management platform, delivering powerful tenant segmentation, license management, governance, and workflow automation capabilities to IT teams who are transforming the way they run their Microsoft 365 stack. With CoreView, organizations can control complexity and costs, optimize administration, resolve security and compliance issues automatically, and empower their IT teams and workforce.

CoreView serves Fortune 5000 and mid-sized enterprises around the world. We are proud to be a Microsoft Gold Partner and available on the Azure Marketplace. We are committed to working exclusively with the global network of Microsoft resellers and service providers.

Everything You Need to Manage Microsoft 365

CoreView's powerful suite of tools lets you analyze, administer, automate, optimize, secure and audit your Microsoft 365 environment.

CoreView acts as a layer between IT administrators and Microsoft 365. We provide a single admin interface that unlocks enormous value. We start by importing every scrap of siloed data from your tenant, organizing it and keeping it up to date. Our Hybrid connector can also pull in on-premises data as is. Now everything is in one place.

C	Control the complexity of Microsoft 365
O	Optimize workflows and license management
R	Resolve issues automatically
E	Empower your IT team and workforce

Control complex environments with tenant segmentation

Segment and delegate administration with CoreView Virtual Tenants™ using any criteria available (e.g., department, location, group membership, business unit). Users can only see and manage objects within their Virtual Tenant. This lets you give local admins more autonomy, since they can only see what they need to see. Virtual Tenants are dynamic too. As your environment changes, your Virtual Tenants are always up to date.

Optimize resources by automating repetitive tasks

CoreView's workflow engine allows teams to combine multiple tasks into an automatic workflow that's faster and never makes mistakes. Workflows go beyond PowerAutomate or PowerShell, letting you run any Microsoft 365 action, any custom action, and select ServiceNow actions. Workflows are centralized and inherit all of the Virtual Tenant and RBAC permissions assigned to a user.

Resolve issues faster across Microsoft 365 environments

Report on nearly anything to do with your Microsoft 365 instance, across users, groups, Microsoft Teams, Exchange, OneDrive, licensing and more. With that visibility, you can detect and resolve any issues you find faster. Improve governance and enforce policies easily.

Empower teams by granting the right access at the right time

Create custom roles with a simple check-mark system. Grant individual or group permissions based on the function being delegated. These permissions are also used to limit what parts of CoreView a delegated user can see. If they're only administering Microsoft Teams, just give them the Microsoft Teams reports they need and nothing else.
