

## OUR PURPOSE

The Cincinnati 2030 District works with building owners and managers within the district to help them reduce energy water and transportation by 50% by 2030:

Reduce **energy** 50%

Reduce **water** usage 50%

Reduce **transportation** related emissions 50%

Support building's **occupant health**

**Enriching Spaces is an active member and professional partner in the Cincinnati 2030 District.**

**We have met our 2030 goals for reduced energy** through efficient heating/cooling and extensive LED retrofits.

**We reduced water usage significantly** by shutting down the property irrigation system after removing all of the grass lawn on our 2.5 acre site.

**Replacing lawn with mulch, stone and pine straw reduced significant CO2 emissions per year.**

No longer were gas mowers and blowers used on the site.

**Eliminating the use of lawn fertilizers** also reduced the release of CO2, nitrous oxide and methane into the air.

**Planting a quantity of eastern white pines** provides carbon reduction, year round beauty, and wildlife habitat.

Reducing transportation related emissions is challenging with our suburban location and no mass transit.

**Providing employees with one WFH day per week reduces these emissions by 20%.**

We are planning future EV chargers to be installed to encourage EV usage.

**As a WELL Platinum Certified Building, we have exceed the Cincinnati 2030 Occupant Health initiatives.**

**Our vendor partner MillerKnoll goals for 2030**

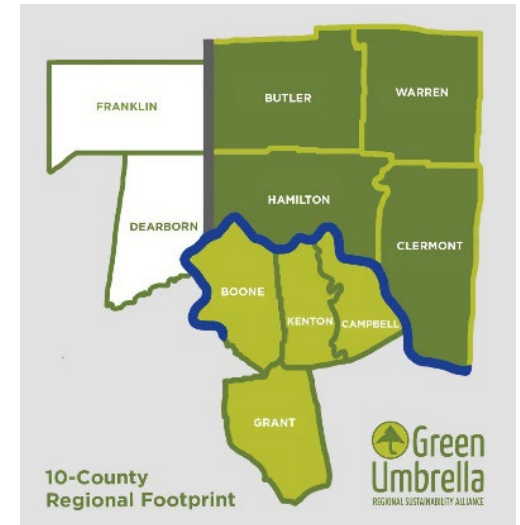

- Reduce Carbon Footprint:** Reduce the carbon footprint from its products and operations by 50% and aim to reduce the carbon footprint of its suppliers.
- Design Out Waste:** Stop using single-use plastics and substantially reduce all types of waste.
- Source Better Materials:** Use 50% or more recycled content and purchase materials that are responsibly and sustainably produced.

**Enriching Spaces is an active member in Green Umbrella**, a network of people, organizations, and governments in the Greater Cincinnati Region committed to taking decisive actions in the face of climate change. Green Umbrella programs help our communities become more climate resilient and equitable by:

decreasing emissions that contribute to climate change,  
increasing carbon storage in the environment,  
increasing access to climate action opportunities to marginalized communities,  
and protecting public health from the impacts of climate change.

### Programs include:

- ❖ Great Outdoor Weekend
- ❖ Tri-State Trails
- ❖ greenspace ALLIANCE
- ❖ Cincinnati 2030 District
- ❖ The Common Orchard Project
- ❖ Annual Midwest Regional Sustainability Summit
- ❖ Greater Cincinnati Regional Food Policy Council
